Course Catalogue

PGDM 2025-27

A note for the reader

The Course Catalogue captures the ‘course briefs’ of Core Courses, Practice Courses, and Elective Courses for PGDM 2025-27 programme. Course briefs are typically a one page snapshot encapsulating the essentials of a course. Course outlines on the other hand, are much longer documents that capture, among other things, the session plan and the readings. They will become available to the learners at the start of a course. The Course Catalogue is intended to help learners get a glimpse into each course to help them decide their pathways.

Financial Accounting and Financial Statement Analysis

Why This Course

Understanding the financial health and performance of a business is essential for every manager and decision-maker. This course introduces the principles and practices of financial accounting and enables students to interpret and analyze financial statements with confidence. By learning how to read income statements, balance sheets, and cash flow statements, students will gain insight into a company's financial condition and its strategic choices. Additionally, through ratio analysis and exposure to real-life financial reports, the course prepares students to make informed decisions based on financial data.

This foundational knowledge is indispensable for anyone aiming to work in corporate roles, finance, consulting, equity analysis, or entrepreneurship.

Pre-requisites (if any): None

Competencies This Course Develops

- Understanding and application of key accounting concepts and rules
- Interpretation of income statements, balance sheets, and cash flow statements
- Ability to perform detailed financial statement analysis using various financial ratios
- Preparation and interpretation of cash flow statements from operations, investing, and financing activities
- Familiarity with ESG-linked financial reporting and key Indian accounting standards
- Exposure to management accounting fundamentals including cost behaviour and break-even analysis

The Course Will Have Significant Relevance For:

- Corporate professionals needing to understand and analyze financial statements
- Aspiring finance professionals, analysts, and consultants
- Entrepreneurs who require strong financial literacy to manage and grow their ventures
- Students pursuing advanced finance electives like Equity Analysis, Valuation, or M&A
- Managers across functions who need to use financial data for operational and strategic decisions

Corporate Finance

Why Take This Course?

Finance is often referred to as the language of business – it helps us translate strategy into numbers, risk into measurable outcomes, and investment into value. Every business decision has financial implications, whether it's launching a new product, acquiring a competitor, or deciding how much to distribute as dividends. This course lays the foundation for understanding how finance drives business decisions.

Corporate Finance is a core course that equips you with the essential tools and conceptual frameworks needed to understand how businesses raise capital, allocate resources, and create value. Whether you are aspiring to be a strategy consultant, investment banker, entrepreneur, or a corporate manager, this course helps you understand how the world of money operates within a corporation.

Pre-requisites (if any): NA

Competencies Developed in This Course

1. Build a strong foundation in financial decision-making and its implications for business.
2. Apply time value of money concepts to real-world business problems.
3. Analyze investment opportunities using capital budgeting techniques.
4. Understand and evaluate risk-return trade-offs using financial models.
5. Value bonds and equities using appropriate financial valuation techniques.
6. Develop a nuanced view of working capital needs and their management.
7. Critically evaluate corporate financing choices and dividend policies.

Relevance and Career Linkages

This course is especially relevant for roles in:

- Roles in general management, finance or strategy across sectors.
- Positions in investment banking, equity research, and credit research.
- Professionals / entrepreneurs involved in project evaluation / developing their own business.

Economics for Business

Why This Course

This course provides a structured way to analyze how individuals, firms, and governments make choices under resource constraints. Whether it is setting prices, entering new markets, managing costs, or responding to policy changes, economic principles guide rational and strategic business decisions.

This course grounds students in the fundamentals of microeconomics and macroeconomics, equipping them to: understand firm behaviour under different market structures, analyze cost behaviour and production efficiency, evaluate the impact of economic policies on business outcomes, interpret key economic indicators to anticipate changes in demand, inflation, and interest rates, and apply concepts like elasticity, marginal analysis, and opportunity cost in everyday business contexts.

By the end of the course, students will possess an economist's toolkit to make informed, data-driven decisions aligned with both firm-level goals and broader economic forces.

Pre-requisites (if any): None

Competencies this course develops

1. Apply microeconomic concepts such as demand, elasticity, production, and cost to business decision-making
2. Understand different market structures and pricing strategies
3. Evaluate the impact of macroeconomic factors like inflation, interest rates, and fiscal policy on business operations
4. Strengthen critical thinking through real-world case studies and application-based problem-solving
5. Communicate economic reasoning effectively in a business context

The course will have significant relevance for

1. Strategy and Consulting: Market analysis, competitive strategy, macroeconomic risk evaluation
2. Finance: Interest rate forecasting, economic scenario analysis
3. Marketing: Pricing, demand estimation, consumer behaviour
4. Entrepreneurship and Product Management: Understanding markets, cost structures, and policy impacts

Organizational Behaviour and Human Resource Management

Why This Course:

Understanding people is at the heart of building successful organizations. This course explores how individuals and teams behave within organizations and how HR systems influence those behaviors. It integrates foundational concepts of Organizational Behaviour—like personality, motivation, and leadership—with core HRM practices such as recruitment, performance management, and compensation. The course emphasizes applying these principles in today's complex work environments shaped by technology, diversity, and ESG imperatives. By linking OB theories with real-world HRM systems, students learn to design people-centric strategies that improve collaboration, employee experience, and organizational effectiveness. This course builds a solid base for those aspiring to shape work cultures and manage human capital in dynamic and ethical ways.

Pre-requisites (if any): None

Competencies this course develops include ability to:

- Understand and analyze individual and group behaviour in workplace settings
- Apply OB concepts to leadership, motivation, and organizational change
- Evaluate and design key HRM systems like recruitment, performance, and rewards
- Integrate OB and HRM for strategic talent and culture decisions
- Interpret the role of ESG, DEI, and digital transformation in managing people
- Use a people-first lens to solve organizational challenges

This Course Will Have Significant Relevance For :

1. HR Business Partner
2. Talent Acquisition Specialist
3. Learning & Development Manager
4. HR Generalist / HR Manager
5. Organizational Development Consultant
6. Change Management Specialist
7. People Analytics & Strategy Roles
8. ESG and DEI Program Manager

Business Strategy and Simulations

Why This Course

This course provides a dynamic and experiential approach to understanding how firms develop, execute, and adjust business strategies to achieve sustainable competitive advantage. Through the integration of business simulations and strategy frameworks, students will act as executive decision makers managing firms in competitive, uncertain environments. The course bridges theory and practice—covering environmental analysis, strategic planning, cross-functional integration, and real-time decision making—while emphasizing critical thinking, teamwork, and leadership. Students will gain actionable insights into the interplay of marketing, operations, finance, HR, and technology in driving firm performance and value creation. The simulated environment allows risk-free experimentation with business decisions, preparing students for complex strategic challenges in real organizations.

Pre-requisites: None

Competencies this course develops

- **Applying strategic management** concepts and analytical tools in simulated business scenarios
- **Crafting**, implementing, and adapting business-level and corporate-level strategies
- **Making cross-functional decisions** with an understanding of their impact on overall firm performance
- **Integrating** market analysis, financial planning, operations, and human resource management in strategy execution
- **Leading** teams, managing conflict, and communicating strategic plans and outcomes effectively
- **Leveraging** digital tools and data analytics for strategic planning and performance measurement

Jobs this course is most relevant to

Applicable for a Career in Consulting, General Management, Business Development, Entrepreneurship, and Leadership Roles in diverse industries

Managerial Decision Making

Why This Course

In an increasingly data-driven business environment, effective decision-making is crucial for organizational success. This course equips students with analytical frameworks and statistical tools to make informed, data-backed managerial decisions. By blending decision science with practical business applications, students learn how to navigate uncertainty, analyze complex problems, and derive actionable strategies.

Pre-requisites (if any): None (Basic understanding of quantitative methods is helpful).

Competencies this course develops

- **Decision Science Fundamentals** – Mastering core principles of decision-making, data-driven strategies, and analytics governance.
- **Descriptive Analytics** – Understanding data measurement scales, central tendency, and variability to summarize business data.
- **Probability & Sampling** – Applying probability distributions (Normal & Standard Normal) and sampling techniques to assess business scenarios.
- **Hypothesis Testing & Confidence Intervals** – Conducting z-tests, t-tests, Chi-square tests, and ANOVA to support managerial decisions.
- **Regression & Correlation** – Building bivariate and multiple regression models to identify patterns, relationships, and predictive insights.
- **Ethical Decision-Making** – Emphasizing accountability, transparency, and governance in the deployment of analytical models.
- **Capstone Applications** – Solving real-world business cases from industries like retail and banking using Excel and statistical tools.

Jobs this course is most relevant to

- **Business Analyst** – Using statistical techniques and regression analysis to inform strategic choices.
- **Consulting** – Applying data-driven frameworks to solve client business problems.
- **Data Science & Analytics** – Building foundational knowledge for advanced analytics roles.
- **Strategic Decision-Making Roles** – Converting data insights into actionable plans across finance, marketing, and operations.

Operations Management

Why This Course

Efficient operations are the backbone of any successful organization. This course provides students with the tools and techniques to design, manage, and optimize processes that enhance business performance. Covering topics such as process analysis, lean principles, inventory control, and sustainable operations, students will learn how to address complex operational challenges in a dynamic, globalized business environment.

Pre-requisites (if any): None.

Competencies this course develops

- **Foundations of Operations Management** – Process mapping, bottleneck analysis, cycle time, and efficiency improvements.
- **Production and Service Systems** – Workload balancing, queuing models, and performance optimization.
- **Inventory Management** – EOQ, safety stock, ABC classification, and managing perishable inventory.
- **Variability and Quality Control** – Statistical process control, process capability analysis, and quality metrics.
- **Revenue and Operations Strategy** – Pricing, capacity allocation, and aligning operations with business strategy.
- **Supply Chain & Sustainability** – Network design, logistics models, and circular economy practices for sustainable growth.

Jobs this course is most relevant to

- **Operations Manager** – Overseeing production processes and ensuring efficiency.
- **Supply Chain Analyst** – Optimizing the flow of goods and services across the value chain.
- **Process Improvement Consultant** – Driving operational excellence through lean and Six Sigma principles.
- **Inventory Strategist** – Managing stock levels and minimizing holding costs across industries.

AI and Technology for Business

Why This Course

In the era of digital transformation, technologies like Artificial Intelligence (AI), Machine Learning (ML), Blockchain, Internet of Things (IoT), and Cybersecurity are reshaping business landscapes and enabling data-driven innovation. This course empowers students with the knowledge and hands-on skills to leverage these technologies for decision-making, operational efficiency, and strategic advantage across key business functions like marketing, finance, HR, and operations.

Pre-requisites (if any): None.

Competencies this course develops

- **AI Fundamentals & Agentic AI** – Understanding core AI techniques, workflows, and business applications of next-gen agentic AI systems.
- **AI in Sales & Marketing** – Using AI for lead generation, CRM automation, campaign optimization, and hyper-personalized customer experiences.
- **AI in Finance & HR** – Applying AI for credit scoring, portfolio optimization, talent acquisition, attrition prediction, and employee engagement.
- **IoT and Blockchain** – Exploring connected ecosystems, smart logistics, and trust-driven solutions with smart contracts and decentralized autonomous organizations (DAOs).
- **Cybersecurity & Responsible AI** – Building awareness of data privacy, AI governance, and ethical AI frameworks.
- **Capstone Project** – Designing and deploying an AI-powered business solution leveraging Generative AI and low-code platforms.

Jobs this course is most relevant to

- **AI Strategy Consultant** – Driving AI adoption and digital transformation initiatives.
- **Digital Transformation Manager** – Leading tech-enabled change management and process innovation.
- **Blockchain Analyst** – Developing trust-driven blockchain solutions for businesses.
- **Marketing Automation Specialist** – Implementing AI-powered marketing strategies and personalization.
- **Cyber Risk Advisor** – Managing data security and ensuring responsible AI deployment.

Practice Courses

No.	Course Code	Course Name	Credits
1	JSPP012	Social Immersion Program (SIP)	5
2	JSPP021	Personality Enhancement Program (PEP)	12
3	JSPP010	*Research Incubation (RI) - Includes coursework in Business Research Methods + Design Thinking	5
OR			
3	JSPP011	*Innovation Incubation (II)- Includes coursework in Business Research Methods + Design Thinking	5
4	JSPP014	Industry Internship Program (IIP)	10

Social Immersion Programme

Why This Course

The Social Immersion Programme (SIP) is essential for developing empathy and tolerance by immersing students in real-world social contexts, especially among underprivileged communities different from their own. It fosters a deep sense of social responsibility and awareness, sensitizing students to diverse lived realities and challenges. By integrating experiential learning with reflective practices, SIP cultivates critical ethical understanding and promotes sustainable, community-centered problem-solving skills. This immersive experience nurtures socially conscious leaders equipped to engage compassionately and effectively in a globalized society while appreciating contextual differences.

Pre-requisites: Course on Introduction to Sustainability

Competencies this course develops

1. **Empathy and Social Awareness:** Students learn to value and understand individuals living differently from themselves, especially those from marginalized backgrounds, fostering genuine empathy and social sensitivity.
2. **Tolerance:** Immersion builds openness to people with different life experiences and contexts, strengthening tolerance and intercultural respect.
3. **Problem Identification and Analytical Skills:** Through direct engagement with social issues, students develop discernment in problem framing, situation analysis, and the ability to define complex societal challenges accurately.
4. **Innovative and Sustainable Solution Development:** Applying the Techno-Economic Viability (TEV) framework, learners evaluate alternatives for addressing social problems, proposing contextually appropriate, self-sustaining solutions.
5. **Communication and Expression:** Students enhance their ability to clearly articulate observations and recommendations through presentations, white papers, blog posts, and group reports.
6. **Ethical Reasoning and Social Responsibility:** SIP encourages moral reflection on social equity, justice, and development, instilling a strong ethical compass oriented towards community well-being.
7. **Interdisciplinary and Systems Thinking:** Immersion engages students in understanding the interconnectedness of economic, social, technological, and environmental systems influencing community issues.
8. **Self-Reflection and Personal Growth:** Daily reflections and peer evaluations foster self-awareness, resilience, and professional development through experiential learning.

Personality Enhancement Program – Level 0 - Discovery

Why This Course

PEP begins with Level 0, which lays the groundwork for developing a holistic personality focusing on four key pillars: self-awareness, emotional resilience, wellness, and professional behavior. It introduces an integrated development process that combines Competency-building workshops, structured Interventions, Behavior and Discipline tracking and Wellness practices.

Using diagnostic assessments and experiential learning activities, Level 0 facilitates the discovery of individual personality strengths and development areas across critical competencies. Students also gain access to tools that help them track and reflect on their personal growth.

Key themes of this level include:

1. Mastering professional etiquette, discipline, and responsible behavior
2. Developing resilience and learning to manage stress effectively
3. Recognizing and overcoming fears and limiting beliefs
4. Introducing physical fitness practices and establishing a sustainable fitness routine

The Capstone of Level 0 is a Personal Brand Presentation to a panel of corporate professionals, giving students an opportunity to articulate their values, strengths, and aspirations in a professional setting. The Holistic Personality Scorecard combines performance across Persona, Wellness, Discipline, and Behavior - to generate a Term Personality Score, recognizing both growth and achievement.

Ultimately, Level 0 cultivates Self-Awareness – a vital skill consistently emphasized in industry reports—as the foundation for personal and professional growth in the subsequent levels of the PEP program.

Pre-requisites (if any): None

Competencies this course develops:

- 1. Self-Awareness:** Recognizing personality traits and behavior patterns to identify strengths and growth areas through reflection and feedback.
- 2. Emotional Resilience:** Developing the ability to handle setbacks with a growth mindset and emotional balance.
- 3. Professional Behavior:** Demonstrating discipline, accountability, and respect; aligning classroom conduct with a professional image; practicing appropriate digital, social, and campus etiquette.
- 4. Personal Branding:** Defining and expressing personal values, strengths, and career goals to build an authentic and consistent professional identity.
- 5. Communication & Interpersonal Skills:** Practicing active listening, clear expression, and respectful collaboration.

6. Wellness & Self-Management: Incorporating daily wellness routines and fitness, managing time, energy, and habits effectively.

Jobs this course is most relevant to: All Domains and all jobs

Personality Enhancement Program – Level 1 - Development

Why This Course

Level 1 develops the 7 Core Competencies essential for personal and professional success, advancing students from self-awareness in Level 0 to practical application and growth. Students engage in simulated workplace scenarios, receive ongoing feedback through complete structured interventions to strengthen their Persona. Self-reflection and performance logs support continuous improvement.

Competency Workshops Include:

1. Oral Communication: Presentations and the art of storytelling
2. Written Communication: Business emails and white paper writing
3. Critical Thinking: Applied through argumentation and critiquing
4. Problem Solving: Explored through real-world case studies
5. Empathy: Expressed and practiced via interpersonal skills
6. Teamwork: Collaboration with active listening, adaptability and conflict resolution

The Wellness Quadrant is enhanced through a structured fitness regimen and physical activities aligned with set wellness standards. The Discipline & Behavior Quadrant, through regular monitoring and reflection, reinforces classroom etiquette and professional conduct introduced in Level 0.

The Debating Capstone enables students to demonstrate all seven competencies in a live evaluation by expert judges. The Holistic Personality Scorecard combines performance across Persona, Wellness, Discipline, and Behavior - to generate a Term Personality Score, recognizing both growth and achievement.

In essence, Level 1 will facilitate the understanding and practice of the 7 Competencies, along with the adoption of good habits and good conduct as vital for a holistic personality to meet the multifaceted demands of modern workplaces.

Pre-requisites (if any): Level 0

Competencies this course develops:

- **Oral Communication:** Public speaking, Persuasive Presentations, Storytelling for impact
- **Written Communication:** Business Email Etiquette, Clarity and Persuasion in writing
- **Critical Thinking:** Logical reasoning, Argumentation, Constructive critiquing
- **Problem Solving:** Analytical thinking, Decision-making, Case-based application
- **Empathy:** Perspective-taking, Emotional sensitivity, Strengthening interpersonal relationships
- **Teamwork:** Collaboration, Active listening, Adaptability & conflict resolution
- **Professional Conduct:** Accountability, Etiquette, Integrity and respectful behavior

- **Wellness and Self-Management:** Building discipline, developing strength, endurance, and flexibility, Setting realistic personal wellness goals

Jobs this course is most relevant to: All Domains and all jobs

Personality Enhancement Program – Level 2 – Growth

Why This Course

Level 2 deepens the 7 Core Competencies, emphasizing Negotiation, Persuasion, Teamwork, and Leadership through active, real-time application in Kanyathon - a student-led charity marathon supporting the Girl Child. All competencies are strengthened through this immersive, live platform.

Key Components of Level 2 are:

1. **Workshops:** Cover Selling Stages—Customer Focus, Empathy, Influencing, Persuasion, and an introduction to Negotiation.
2. **Live Application:** Students apply these skills while organizing and selling passes for Kanyathon, working in teams to meet real-time goals.
3. **Leadership & Teamwork:** Practiced within Kanyathon departments, simulating workplace roles and responsibilities.
4. **Interventions:** Include field-based practice, reviews, and skill reflection logs to reinforce learning and monitor growth.

Students with Level 1 competency gaps receive repeat workshops and targeted interventions to improve performance through guided practice. The Wellness Quadrant continues to hone self-discipline habits through a structured fitness regimen and selected physical activities coupled with a battery of fitness assessments. The Discipline & Behavior Quadrant is strengthened through monitoring of conduct in Kanyathon departments encouraging professionalism in simulated workplace scenarios.

A Capstone Intervention showcases each student's competency development and outcomes via Kanyathon. Performance is evaluated by a Jury of Corporate Experts. The Holistic Personality Scorecard aggregates results across all 4 PEP Quadrants—Persona, Wellness, Discipline, Behavior—to generate a Term Personality Score, rewarding both improvement and achievement.

To sum up, Level 2 enables students to apply competencies in real-world contexts, reinforce professional behavior, and continue building habits essential for a strong, holistic personality ready for the workplace.

Pre-requisites (if any): Level 1

Competencies this course develops:

- **Oral Communication:** Public speaking, pitching, persuasive speaking, meeting etiquette
- **Critical Thinking:** Strategizing for event success, analyzing field challenges, Making decisions
- **Problem Solving:** Overcoming sales barriers, logistics issues, or team conflicts, Applying solutions
- **Empathy:** Understanding customer motivation, practicing emotional intelligence within teams

- **Teamwork:** Coordinating within departments, cooperation, and mutual accountability
- **Leadership:** Leading teams, motivating peers, setting goals, delegating tasks, ensuring outcomes
- **Negotiation & Persuasion:** Selling passes, securing sponsorships, gaining support, Influencing
- **Discipline & Self-Management:** Maintaining schedules, balancing timelines
- **Wellness Habits:** Consistent physical activity and discipline in fitness routines

Jobs this course is most relevant to: All Domains and all jobs

Personality Enhancement Program – Level 3 – Mastery

Why This Course

Level 3 focuses on mastering the 7 Core Competencies by applying them in the student's chosen functional domain. Students engage in higher-order tasks that connect competencies to real-world applications within their discipline.

Key Components of Level 3 are:

1. Competency Workshops: contextualized for specific domains
2. Functional Application: interventions, and evaluations designed around domain-relevant scenarios.
3. Individual Mentoring: Personalized pathways to strengthen competencies through guided application in domain areas.
4. Certification: Competency mastery is certified through domain-specific assessments.

Persona interventions are through domain-focused debates, discussions, book critiques, case study analysis, data-driven and decision-making presentations. Discipline and Behavior Quadrants continue as enablers of good habits and improved social interactions. In addition, students strive to gain Mastery in their selected fitness form and achieve fitness standards in the Wellness Quadrant.

The Capstone Intervention is a Business Simulation and Presentation, evaluated by a Corporate Jury, where students demonstrate domain-specific decisions and defend using technical and strategic reasoning. As in earlier levels, performance across all 4 PEP Quadrants—Persona, Wellness, Discipline, and Behavior is evaluated to generate a Term Personality Score, recognizing both growth and excellence.

Finally, Level 3 prepares students to demonstrate mastery of competencies in real-world contexts, helping them build a holistic personality ready for the complex demands of modern professional environments.

Pre-requisites (if any): Level 2

Competencies this course develops:

- **Oral Communication:** Articulating domain arguments, speaking in debates and discussions
- **Written Communication:** Writing domain-relevant reports
- **Critical Thinking:** Evaluating using logic and evidence, forming judgments, questioning assumptions
- **Problem Solving:** Applying analytical thinking to case studies and business simulations, Making decisions based on data, logic, and strategic thinking
- **Empathy:** Understanding stakeholder perspectives in domain scenarios
- **Teamwork:** Balancing roles and resolving conflict during simulations and projects
- **Leadership:** Taking initiative in domain-focused tasks, Leading teams in planning, analysis, and presentations
- **Wellness Habits:** Consistent physical activity and discipline in fitness routines

Jobs this course is most relevant to: All Domains and all jobs

Personality Enhancement Program – Level 4 – Win- Win Negotiation

Why This Course

Level 4 focuses on Negotiation Skills, a composite competency that integrates all the key traits developed in earlier levels - self-awareness, emotional intelligence, ethical judgment, and communication. As a behavioral competency, negotiation reflects one's personality, mindset, and interpersonal effectiveness.

The Win-Win Negotiation course uses a practical, stage-wise approach to equip students with essential tools like BATNA, ZOPA, and Position vs. Interest analysis. Students learn to prepare, propose, and bargain effectively, manage difficult conversations, and build a collaborative mindset for achieving mutually beneficial outcomes in real-world settings.

Key Components of Level 3 are:

1. Understanding the Elements of Negotiation
2. The Different Phases – Preparation, Discussion, Proposing, Bargaining
3. Avoiding & Managing Difficult Negotiating Situations

Persona interventions are through group discussions; role plays and case study analysis and presentations.

Discipline and Behavior Quadrants continue as enablers of good habits and improved social interactions. In addition, students continue to achieve Mastery in their selected fitness form and achieve fitness standards in the Wellness Quadrant.

The Capstone Intervention is a Case based Presentation, an enactment of a Role play followed by a Viva evaluated by a Corporate Jury. As in earlier levels, performance across all 4 PEP Quadrants—Persona, Wellness, Discipline, and Behavior is evaluated to generate a Term Personality Score, recognizing both growth and excellence.

Level 4 prepares students to enter the workplace with a fully integrated personality, equipped with the strategic, interpersonal, and ethical competencies needed to negotiate confidently and constructively in real-world situations.

Pre-requisites (if any): Level 3

Competencies this course develops:

- 1. Negotiation Competency:** Navigate negotiation stages, achieve mutually beneficial outcomes, Using tools like BATNA, ZOPA, and Position-Interest analysis
- 2. Self-Awareness:** Recognizing personal negotiation style, triggers, and limits
- 3. Emotional Intelligence:** Managing emotions, Showing empathy towards the counterpart's perspective
- 4. Communication Skills:** Active listening, Assertive style, Framing and presenting persuasively

5. Interpersonal Effectiveness: Building rapport and trust, Collaborative problem-solving

6. Strategic Thinking: Planning, Analyzing, understanding motivations, Handling deadlocks, adapting

Jobs this course is most relevant to: All Domains and all jobs

Industry Internship Program

Why This Course

The Industry Internship Program bridges classroom learning with real world business practice. Serving as a capstone course, the IIP immerses students in a corporate environment for three months, where they tackle authentic business challenges. Students partner with organizations to address substantive problems, applying analytical frameworks, strategic thinking, and multidisciplinary knowledge gained through their program. Faculty guidance and structured feedback ensure a focus on continuous improvement and professional growth. This experience cultivates confidence, practical insights, and a strong foundation for career advancement across disciplines.

Pre-requisites: None (Eligibility as per IIP policy; typically undertaken at the advanced stage of the program)

Competencies this course develops

- Deconstructing and framing organizational problems using data and structured analysis
- Evaluating alternatives, synthesizing insights, and presenting feasible solutions that satisfy stakeholders across functions
- Engaging in rigorous primary and secondary research to support actionable recommendations
- Strengthening oral and written communication skills through reports, presentations, and professional documentation
- Navigating teamwork, managing client relationships, and demonstrating business professionalism in a real-world context

Applicable for all students irrespective of major area.

Introduction to Python Programming

Why This Course

Python has become the go-to programming language for data analytics, machine learning, and automation, surpassing traditional tools like Excel for scalable and robust business solutions. This course introduces students to the fundamentals of Python programming with a focus on data manipulation and visualization. Through hands-on practice with libraries like NumPy, pandas, and seaborn, students will learn to analyze real-world datasets and generate actionable insights for data-driven decision-making.

Pre-requisites (if any): None.

Competencies this course develops

- **Python Basics** – Mastering data types, variables, operators, control statements, loops, and file handling.
- **Data Structures & Functions** – Working with strings, lists, tuples, dictionaries, modules, and functions.
- **Data Manipulation** – Using NumPy arrays, pandas Series, and DataFrames for data preparation and transformation.
- **Data Visualization** – Creating histograms, scatterplots, heatmaps, and interactive visualizations using seaborn and Plotly.
- **Python for Business Analytics** – Implementing analytical workflows and solving business problems with real datasets.
- **Capstone Project** – Conducting an end-to-end data analysis and visualization project using Python.

Jobs this course is most relevant to

- **Data Analyst** – Leveraging Python for data cleaning, analysis, and visualization.
- **Business Intelligence Specialist** – Building dashboards and analytical workflows for decision-making.
- **Python Developer** – Developing automation scripts and data-centric applications.
- **Machine Learning Associate** – Laying the foundation for advanced AI and ML techniques.

Business Data Visualization

Why This Course

Data visualization is essential for converting complex datasets into meaningful insights and impactful business narratives. This course equips students with the principles of visualization, dashboard design, and data storytelling using tools like Tableau and Excel. Through hands-on projects, students learn to build dynamic dashboards, uncover patterns, and analyze trends that support data-driven decision-making.

Pre-requisites (if any): Basic Business Understanding.

Competencies this course develops

- **Foundations of Data Visualization** – Understanding visualization principles, perspectives, and creating initial dashboards with Tableau.
- **Dashboard Design** – Building hierarchies, map charts, dual-axis visuals, and layered visualizations.
- **Time Series & Filters** – Creating time series plots, managing date fields, and using filters, parameters, and sets for interactivity.
- **Advanced Visual Analytics** – Developing animated visuals, storytelling dashboards, and crosstab displays.
- **Specialized Visualizations** – Designing waterfall charts, bump charts, bullet graphs, trend lines, and forecasting models.
- **Capstone Project** – Creating and presenting interactive dashboards that generate actionable business insights.

Jobs this course is most relevant to

- **Business Analyst** – Leveraging visualization for data-driven recommendations.
- **Data Visualization Specialist** – Designing compelling dashboards for diverse audiences.
- **BI Consultant** – Building analytics solutions for strategic decision-making.
- **Analytics Manager** – Translating data into visual narratives that guide business strategies.

Advanced Quantitative Techniques for Management

Why This Course

Advanced Quantitative Techniques for Management builds upon foundational quantitative methods, equipping students with sophisticated analytical tools to solve complex business problems. The course emphasizes linear and non-linear optimization, simulation modeling, forecasting, time series analysis, multivariate techniques, and advanced probability models. With a strong focus on practical applications, students will use Excel, R, and Python to support data-driven and strategic decision-making.

Pre-requisites (if any): Managerial Decision Making, Introduction to Python.

Competencies this course develops

- **Advanced Optimization Techniques** – Applying simplex, duality, transportation, assignment, and goal programming for resource allocation.
- **Decision Trees & Monte Carlo Simulation** – Conducting risk analysis and building expected value models.
- **Probability & Queuing Models** – Analyzing Markov chains, Poisson processes, and optimizing service levels.
- **Forecasting & Time Series** – Implementing ARIMA models, exponential smoothing, and demand prediction techniques.
- **Multivariate Analysis** – Using PCA, factor analysis, and clustering for segmentation and insights.
- **Simulation & System Dynamics** – Performing discrete-event simulations and feedback-based system modeling.
- **Capstone Project** – Integrating advanced quantitative techniques to solve a real-world business challenge.

Jobs this course is most relevant to

- **Operations Research Analyst** – Designing and optimizing business processes.
- **Business Analytics Professional** – Leveraging advanced models for predictive and prescriptive analytics.
- **Financial Modeler** – Building robust forecasting and optimization models for financial decisions.
- **Supply Chain Optimization Specialist** – Enhancing efficiency using quantitative techniques.

- **Management Consultant** – Delivering strategic insights using advanced simulation and modeling tools.

Business Requirement Analysis

Why This Course

Business Requirement Analysis (BRA) is critical for ensuring project success by identifying, eliciting, and defining stakeholder needs. This course provides students with the frameworks, tools, and techniques used by business analysts to gather, document, and evaluate requirements effectively. Students will gain practical exposure to the BABOK framework and industry best practices for designing and managing business requirements.

Pre-requisites (if any): Basic Business Understanding.

Competencies this course develops

- **Introduction to Business Analysis** – Understanding the role of business analysts, BABOK knowledge areas, and Business Analysis Core Concept Model (BACCM).
- **Business Analysis Planning** – Engaging stakeholders, establishing governance, managing information, and developing business cases.
- **Elicitation & Collaboration** – Using interviews, workshops, and validation techniques to gather and refine requirements.
- **Requirement Life Cycle Management** – Prioritizing, tracing, and maintaining requirements through the project life cycle.
- **Requirement Analysis & Design** – Building use cases, process models, and solution design strategies.
- **Strategy Analysis & Solution Evaluation** – Comparing current vs. future states, evaluating solution performance, and driving continuous improvement.

Jobs this course is most relevant to

- **Business Analyst** – Bridging business and technology through effective requirement documentation.
- **Product Manager** – Defining product requirements and roadmaps.
- **IT Consultant** – Analyzing client needs and translating them into actionable solutions.
- **Process Improvement Specialist** – Enhancing workflows and solutions using structured requirement analysis.

Data Management with SQL

Why This Course

Data is at the core of modern business operations, and SQL is the language that powers data management. This course equips students with the ability to design, manage, and query relational databases, enabling data-driven decision-making across business functions. With a focus on PostgreSQL, students will gain hands-on expertise in database design, SQL querying (from basic to advanced), performance optimization, and integration with analytics tools.

Pre-requisites (if any): Business Requirement Analysis.

Competencies this course develops

- **Database Design** – Understanding RDBMS concepts, schemas, ER modeling, and relational integrity.
- **SQL Foundations** – Writing DDL and DML commands, SELECT statements, and applying WHERE conditions and filters.
- **Functions and Aggregations** – Using string, numeric, and date functions; GROUP BY and HAVING clauses for data summarization.
- **Joins and Subqueries** – Implementing INNER, OUTER, and self-joins; building nested and correlated subqueries.
- **Advanced SQL** – Applying window functions, Common Table Expressions (CTEs), indexing, and query optimization techniques.
- **Views, Procedures, and Triggers** – Developing reusable database components for automation and efficiency.
- **SQL for Analytics** – Leveraging SQL for KPI reporting and integrating with BI tools like Tableau and Python.
- **Capstone Project** – Designing and querying an end-to-end database for a real-world business dataset.

Jobs this course is most relevant to

- **Data Analyst** – Querying databases to extract actionable insights.
- **SQL Developer** – Designing and optimizing database queries and structures.
- **Business Intelligence Specialist** – Using SQL to power BI dashboards and reporting.
- **Data Engineer** – Building scalable database solutions for enterprise data systems.

Unstructured Data Analytics

Why This Course

With the rapid explosion of text, audio, and image data, businesses need advanced techniques to extract actionable insights from unstructured information. This course equips students with Python-based programming and machine learning methods for handling diverse unstructured data types. Students gain hands-on experience in Natural Language Processing (NLP), Computer Vision, and Speech Recognition, using libraries like NLTK, spaCy, transformers, OpenCV, and Librosa to build end-to-end analytics pipelines.

Pre-requisites (if any): Predictive Modelling, Python Programming, Managerial Decision Making.

Competencies this course develops

- **Foundations of Unstructured Data** – Differentiating between structured, semi-structured, and unstructured data, with practical business use cases.
- **Text Analytics and NLP** – Implementing text preprocessing, tokenization, stemming, lemmatization, vectorization (TF-IDF, word embeddings), sentiment analysis, and topic modeling.
- **Advanced NLP Techniques** – Performing entity recognition, text similarity, document clustering, and developing search engine applications.
- **Image and Video Analytics** – Learning computer vision fundamentals, OpenCV operations (smoothing, thresholding, histogram analysis), and image transformations.
- **Audio and Speech Analytics** – Working with speech recognition, speech-to-text, text-to-speech conversion, and audio feature extraction using Python.
- **Capstone Project** – Building an integrated unstructured data analytics pipeline combining text, image, and audio datasets.

Jobs this course is most relevant to

- **Data Scientist** – Building advanced ML models for unstructured data.
- **NLP Engineer** – Designing and deploying natural language processing solutions.
- **Machine Learning Analyst** – Applying deep learning techniques for text, audio, and image analytics.
- **Computer Vision Specialist** – Developing image and video analysis solutions for real-world applications.

Predictive Modeling for Business

Why This Course

Predictive modeling is a vital tool for data-driven decision-making in modern enterprises. This course provides in-depth knowledge of statistical modeling techniques, including regression, logistic models, and time-series forecasting. Students will gain hands-on experience with R and R Studio to build, evaluate, and refine predictive models. Through real-world case studies, they will learn how to convert raw data into actionable insights that drive business performance.

Pre-requisites (if any): Managerial Decision Making, Introduction to Python.

Competencies this course develops

- **Regression Models** – Building simple and multiple linear regression models, conducting residual analysis, and addressing data challenges.
- **Non-Linear Models** – Applying functional transformations and logistic regression for categorical outcome predictions.
- **Model Building with R** – Using stepwise selection, dummy variables, and interaction terms for advanced model development.
- **Time Series Forecasting** – Performing trend analysis, extrapolation techniques, and building time-series models in R.
- **Case-Based Learning** – Applying predictive techniques to business scenarios like portfolio analysis and market value forecasting.
- **Capstone Application** – Designing and implementing predictive and time-series models for a real-world business case.

Jobs this course is most relevant to

- **Data Scientist** – Developing and deploying predictive analytics solutions.
- **Business Analyst** – Leveraging statistical models to inform strategic decisions.
- **Financial Modeler** – Forecasting financial metrics and market trends using predictive techniques.
- **Market Forecaster** – Using data-driven models to anticipate customer demand and market behavior.

Introduction to AI and Machine Learning

Why This Course

Artificial Intelligence (AI) and Machine Learning (ML) are transforming industries by enabling automation, predictive analytics, and intelligent decision-making. This course provides a foundational understanding of AI and ML concepts, including supervised and unsupervised learning, neural networks, natural language processing, recommendation systems, and generative AI. Students gain hands-on experience with Python-based tools and real-world datasets to develop AI-driven business solutions.

Pre-requisites (if any): Managerial Decision Making, Introduction to Predictive Modelling, AI and Technology for Business, Introduction to Python Programming.

Competencies this course develops

- **Foundations of AI & ML** – Understanding the evolution of AI, types of ML, and their applications across business functions.
- **Supervised Learning** – Building regression and classification models, evaluating performance, and predictive modeling.
- **Unsupervised Learning** – Performing clustering, customer segmentation, and dimensionality reduction (PCA).
- **Neural Networks & Deep Learning** – Learning perceptrons, activation functions, and deep learning applications.
- **NLP & Recommendation Systems** – Conducting text analytics, sentiment analysis, and developing personalized recommendation engines.
- **Generative AI & Ethics** – Exploring prompt engineering, large language models (LLMs), and frameworks for responsible AI.

Jobs this course is most relevant to

- **AI Product Manager** – Leading AI-powered product innovation and strategy.
- **Data Analyst** – Applying machine learning models to derive actionable insights.
- **Machine Learning Specialist** – Designing and deploying supervised and unsupervised learning solutions.
- **Business Strategy Consultant** – Leveraging AI and ML to drive digital transformation and decision intelligence.

Deep Learning for Business Applications

Why This Course

Deep learning is revolutionizing how businesses address complex challenges by utilizing advanced neural architectures for predictive modeling, risk forecasting, and unstructured data analysis. This course provides students with the technical and practical expertise to design, train, and deploy deep learning models—such as CNNs, RNNs, LSTMs, and transformers—specifically tailored to business applications like financial forecasting, fraud detection, sentiment analysis, and portfolio optimization.

Pre-requisites (if any): Managerial Decision Making, Introduction to Predictive Modelling, AI and Technology for Business, Introduction to Python Programming.

Competencies this course develops

- **Neural Network Fundamentals** – Understanding artificial neural networks (ANNs), activation functions, backpropagation, and gradient descent.
- **Sequence Models (RNN & LSTM)** – Modeling time-series and sequential data for financial forecasting and risk analysis.
- **Autoencoders** – Applying dimensionality reduction, anomaly detection, and data compression techniques for business datasets.
- **Convolutional Neural Networks (CNNs)** – Using CNNs for multivariate time-series, structured financial data, and feature extraction.
- **Model Interpretability** – Employing SHAP, LIME, and attention mechanisms for explainability and regulatory compliance.
- **Capstone Project** – Developing end-to-end deep learning pipelines to solve real-world financial and business challenges.

Jobs this course is most relevant to

- **AI-Driven Trading Specialist** – Designing deep learning models for financial market predictions.
- **Quantitative Research Analyst** – Applying neural architectures for data-driven research and risk assessment.
- **Financial Data Scientist** – Leveraging deep learning for portfolio optimization and fraud detection.
- **Intelligent Automation Expert** – Building scalable AI-powered automation solutions for businesses.

Generative AI for Business

Why This Course

Generative AI (GenAI) is reshaping industries by enabling automation in content creation, customer experience, and decision-making. This course introduces students to Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), and prompt engineering, focusing on building real-world business applications such as chatbots, marketing campaign tools, and automated reporting systems. Students will gain hands-on experience with leading GenAI platforms and APIs, while also addressing the ethical and governance challenges associated with AI deployment.

Pre-requisites (if any): Introduction to AI & ML, Introduction to Python Programming.

Competencies this course develops

- **Generative AI Fundamentals** – Understanding GPT, BERT, diffusion models, and their impact on business.
- **Prompt Engineering & Design Thinking** – Developing effective prompts, role prompting, chain-of-thought methods, and structured workflows.
- **RAG Pipelines & LangChain** – Building enterprise-grade AI solutions using FAISS, Chroma, and vector embeddings.
- **Fine-tuning LLMs** – Customizing models for domain-specific needs and evaluating performance with BLEU, ROUGE, and perplexity metrics.
- **AI Agents & Automation** – Designing agentic AI systems for HR, marketing, and operational automation.
- **Capstone Project** – Creating an end-to-end GenAI prototype, such as a business chatbot or document automation solution.

Jobs this course is most relevant to

- **GenAI Consultant** – Advising organizations on generative AI adoption and strategy.
- **AI Automation Specialist** – Designing automated workflows and solutions powered by AI agents.
- **LLM Engineer** – Building and fine-tuning large language models for enterprise needs.
- **Digital Innovation Strategist** – Leveraging GenAI to drive transformation across business functions.

Project Management

Why This Course

Project Management is critical for executing initiatives that deliver measurable business value. This course introduces students to globally recognized frameworks such as PMBOK and Agile, covering project planning, stakeholder management, cost and time optimization, risk assessment, and quality control. Students will gain practical experience with tools like JIRA and MS Project to plan, manage, and evaluate projects across diverse industries.

Pre-requisites (if any): Business Requirement Analysis, Operations Management.

Competencies this course develops

- **Project Management Fundamentals** – Understanding project lifecycles, PMOs, and comparing PMBOK vs PRINCE2 frameworks.
- **Integration, Scope, and Time Management** – Creating Work Breakdown Structures (WBS), Gantt charts, and applying PERT/CPM techniques.
- **Cost, Quality, and Resource Management** – Conducting earned value analysis, quality assurance, and team-building strategies.
- **Risk and Procurement Management** – Managing risk registers, contract types, and vendor selection approaches.
- **Agile and Hybrid Approaches** – Applying Scrum, Kanban, and evaluating Waterfall vs Agile methodologies.
- **Capstone Project** – Developing comprehensive project plans and delivering presentations using real-world tools like JIRA or MS Project.

Jobs this course is most relevant to

- **Project Manager** – Leading cross-functional project teams and ensuring timely delivery.
- **Program Coordinator** – Assisting in program execution and performance tracking.
- **PMO Analyst** – Supporting governance and best practices within project management offices.
- **Operations Consultant** – Enhancing project efficiency and business operations through structured project methodologies.

Pre-sales in Analytics

Why This Course

Pre-sales in Analytics plays a crucial role in bridging analytics expertise with business consulting, focusing on designing impactful solutions that align with client needs. This course equips students with the ability to conduct client discovery, craft high-level analytics solutions, prepare winning proposals, and deliver persuasive demos. Through roleplay simulations, hands-on exercises, and case studies, students will master pricing models, ROI calculations, and stakeholder management—key skills for driving analytics engagements from lead qualification to deal closure.

Pre-requisites (if any): Marketing Management, Managerial Decision Making.

Competencies this course develops

- **Foundations of Pre-sales** – Understanding the role of pre-sales in analytics consulting and business development.
- **Client Discovery & Requirement Gathering** – Conducting structured interviews and mapping business challenges to analytics solutions.
- **Solutioning & Proposal Design** – Creating high-level analytics architectures, responding to RFPs, and articulating value propositions.
- **Pricing & ROI Modeling** – Building financial models, performing cost-benefit analysis, and designing value-based pricing strategies.
- **Demos & Storytelling** – Developing engaging POCs, dashboards, and narrative-driven client presentations.
- **Objection Handling & Stakeholder Management** – Negotiating, building trust, and effectively addressing client concerns.
- **Capstone Project** – Executing an end-to-end pre-sales case simulation, including discovery, proposal creation, and client pitching.

Jobs this course is most relevant to

- **Pre-sales Consultant** – Leading solutioning and proposal development for analytics projects.
- **Analytics Solution Architect** – Designing high-level frameworks for client needs.
- **Product Manager** – Aligning product roadmaps with customer requirements.
- **Business Development Manager** – Driving client acquisition and value-based engagements for technology and SaaS firms.

Platformization and Productization

Why This Course

Platform-based business models and productized analytics solutions are transforming industries in the digital era. This course introduces students to the principles of platformization, productization, and ecosystem thinking, with a focus on data-driven strategies, monetization models, and scaling techniques. Students will learn how to design and manage platform ecosystems, convert analytics services into scalable products, and leverage emerging technologies like AI, APIs, and blockchain to build competitive digital businesses.

Pre-requisites (if any): Business Requirement Analysis, Managerial Decision Making, Introduction to Python Programming.

Competencies this course develops

- **Foundations of Platformization** – Understanding platform vs. pipeline models, network effects, and digital ecosystems.
- **Productization of Analytics & AI** – Designing data-as-a-product solutions, APIs, and modular architectures for scalability.
- **Platform Business Models** – Exploring multi-sided marketplaces, SaaS, freemium models, and key metrics like CAC and LTV.
- **Monetization & Growth** – Crafting pricing models, growth hacking strategies, and viral loop mechanisms.
- **Technology Enablers** – Leveraging cloud technologies, blockchain, and API-first ecosystems.
- **Ecosystem Design & Governance** – Managing partner onboarding, trust-building, and data governance policies.
- **Capstone Project** – Creating and presenting a platform or product prototype with defined business KPIs.

Jobs this course is most relevant to

- **Platform Strategist** – Designing and managing platform-based business models.
- **Product Manager** – Leading productization initiatives for analytics and AI solutions.
- **Digital Transformation Consultant** – Driving platform-based digital innovation strategies.
- **Growth Lead** – Scaling platforms and products through data-driven monetization and growth strategies.

Cloud Computing for Business Value

Why This Course

Cloud computing is revolutionizing IT resource management by offering cost-efficiency, scalability, and agility. This course introduces the fundamentals and practical aspects of cloud technologies, with a focus on leading platforms such as AWS and Microsoft Azure. Students will explore cloud architecture, deployment models, migration strategies, and security frameworks, while analyzing the financial and operational impact of cloud adoption for business value.

Pre-requisites (if any): AI and Technology for Business.

Competencies this course develops

- **Cloud Computing Fundamentals** – Understanding IaaS, PaaS, SaaS models, and the pay-per-use concept.
- **Cloud Architecture & Migration** – Evaluating public, private, and hybrid cloud platforms, deployment models, and scaling strategies.
- **Cloud Platforms & Tools** – Gaining hands-on exposure to AWS, Microsoft Azure, Salesforce, and Databricks.
- **Cloud Security & Governance** – Applying data privacy measures, encryption techniques, single sign-on, and analyzing industry case studies.
- **Cost Analysis & Business Impact** – Conducting financial assessments to guide cloud migration and strategic decision-making.
- **Capstone Use Cases** – Implementing real-world data analytics and job scheduling projects using tools like Rundeck and Ranger.

Jobs this course is most relevant to

- **Cloud Solution Architect** – Designing and implementing scalable cloud solutions.
- **DevOps Engineer** – Streamlining operations through cloud-based automation.
- **Cloud Security Analyst** – Ensuring data protection and compliance in cloud environments.
- **Cloud Migration Consultant** – Leading the migration of legacy systems to cloud platforms.
- **Enterprise IT Strategist** – Aligning cloud solutions with business transformation initiatives.

Supply Chain Analytics

Why This Course

Supply Chain Analytics leverages data-driven insights to enhance supply chain efficiency, reduce costs, and improve customer satisfaction. This course teaches students how to apply analytics in inventory management, transportation, and logistics planning through real-life case studies. The focus is on strategic decision-making and performance optimization to drive competitive advantage.

Pre-requisites (if any): Operations Management, Managerial Decision Making, Introduction to Python Programming

Competencies this course develops

- **Introduction to Supply Chain Analytics** – Conducting competitive analysis, benchmarking, and identifying areas for improvement.
- **Supply Chain Planning Principles** – Evaluating push vs. pull strategies and understanding cost-efficiency trade-offs.
- **Data Analytics for Supply Chain** – Applying analytics for inventory and shipping cost estimation, warehouse optimization, and net impact analysis.
- **Customer Experience & Logistics** – Assessing store operations, customer experience, and effective implementation strategies.
- **Application Project** – Analyzing a real-world case study (e.g., VASTA) to diagnose inefficiencies and propose cost-saving strategies.

Jobs this course is most relevant to

- **Supply Chain Analyst** – Using data analytics to streamline supply chain operations.
- **Operations Strategy Consultant** – Driving cost reductions and operational excellence through analytics.
- **Logistics Consultant** – Designing optimized transportation and logistics frameworks.
- **Inventory Optimization Specialist** – Managing stock levels with data-driven models for efficiency.

Marketing Analytics (crosslisted from Marketing Area)

Why This Course

In a hyper-competitive digital marketplace, businesses thrive on the ability to convert data into meaningful marketing strategies. Marketing Analytics merges data science with marketing principles to optimize campaigns, elevate customer engagement, and drive sustainable growth. This course covers essential analytical techniques such as customer segmentation, predictive modeling, marketing mix modeling, and digital marketing performance metrics. Students will learn how to leverage advanced tools and real-world data to craft actionable, insight-driven strategies across channels like social media, e-commerce, and CRM.

Pre-requisites (if any): None specified.

Competencies this course develops

- **Foundations of Marketing Analytics** – Understanding the role of data in marketing decisions and identifying key performance indicators (KPIs).
- **Customer Segmentation & Targeting** – Applying clustering techniques, RFM analysis, and building customer personas for precision targeting.
- **Predictive Analytics for Marketing** – Forecasting customer behavior using regression, classification, and churn modeling.
- **Digital Marketing Metrics** – Evaluating web analytics, SEO, PPC, and social media metrics to measure ROI and campaign effectiveness.
- **Marketing Mix & Attribution Modeling** – Optimizing channel effectiveness, campaign budgeting, and media mix allocation.
- **Capstone Project** – Executing an end-to-end marketing analytics project covering campaign design, implementation, and performance evaluation.

Jobs this course is most relevant to

- **Marketing Analyst** – Leveraging data insights to improve marketing performance.
- **Digital Marketing Strategist** – Designing data-driven multi-channel campaigns.
- **Customer Insights Manager** – Translating customer data into actionable strategies.
- **Growth Marketing Specialist** – Driving revenue and engagement through advanced marketing analytics techniques.

HR Analytics & Data Driven Decision Making (crosslisted from HR Area)

Why This Course

People are an organization's most valuable asset, and data is the key to unlocking their full potential. HR Analytics empowers businesses to make strategic, evidence-based decisions in workforce planning, talent acquisition, employee engagement, and retention. This course equips students with cutting-edge techniques to analyze HR metrics, forecast workforce trends, and align people strategies with business objectives. Students will gain hands-on expertise in transforming HR data into actionable insights that enhance both organizational performance and employee experience.

Pre-requisites (if any): Introduction to Python Programming

Competencies this course develops

- **Introduction to HR Analytics** – Understanding the role of data in modern HR practices and key workforce performance indicators.
- **Talent Acquisition & Recruitment Analytics** – Applying predictive models for candidate evaluation, hiring efficiency, and pipeline quality.
- **Employee Engagement & Retention** – Leveraging attrition prediction, sentiment analysis, and survey data for improved retention strategies.
- **Performance & Productivity Analytics** – Linking employee performance metrics with business outcomes to drive productivity.
- **Workforce Planning & Forecasting** – Conducting headcount planning, skill gap analysis, and succession planning for future-ready teams.
- **Capstone Project** – Designing an HR analytics dashboard or predictive model to solve a real-world HR challenge.

Jobs this course is most relevant to

- **HR Analyst** – Utilizing data insights to optimize HR operations.
- **People Analytics Specialist** – Driving strategic HR decisions through analytics.
- **Workforce Strategist** – Aligning talent planning with organizational growth.
- **Talent Insights Manager** – Building data-driven employee engagement and retention strategies.

Business Analytics Capstone Project

Why This Course

The Business Analytics Capstone Project is the program's pinnacle, designed to bridge academic learning with real-world business challenges. Students synthesize concepts from analytics, machine learning, and business strategy to deliver data-driven solutions with measurable impact. Working on live datasets or industry-sponsored projects, students develop predictive models, generate actionable insights, and craft strategic recommendations tailored for decision-makers.

Pre-requisites (if any): Completion of core courses in analytics, machine learning, and business strategy.

Competencies this course develops

- **Project Scoping & Problem Definition** – Identifying high-value business challenges, setting clear objectives, and formulating data-driven hypotheses.
- **Data Collection & Preparation** – Acquiring, cleaning, and transforming raw datasets into analysis-ready formats.
- **Analytical Modeling** – Applying advanced techniques such as regression, clustering, forecasting, and machine learning algorithms.
- **Visualization & Storytelling** – Building compelling dashboards and crafting narratives using tools like Tableau, Power BI, or Python visualization libraries.
- **Business Impact Assessment** – Translating model outputs into strategic, financially viable recommendations.
- **Final Presentation & Report** – Delivering an end-to-end project with actionable insights, model evaluations, and executive-level business implications.

Jobs this course is most relevant to

- **Business Analyst** – Bridging data insights with strategic business needs.
- **Data Scientist** – Developing predictive and prescriptive analytics solutions.
- **Strategy Consultant** – Leveraging analytics to shape business decisions and market positioning.
- **Analytics Manager** – Leading cross-functional projects to drive business transformation through data.

Finance Area Electives

Sr No	Course Code	Course Name	Credits	Pre-requisite	Bucket
1	JSPF326	Cost and Management Accounting	2	None	B0
2	JSPF327	Financial Markets	2	None	B0
3	JSPF314	Principles and Practices of Banking	2	None	B0
4	JSPF328	Rural Banking and Microfinance	2	None	B0
5	JSPF331	Fundamentals of FinTech	2	None	B0
6	JSPF302	Security Analysis and Portfolio Management	3	Corporate Finance, Financial Accounting and Financial Statement Analysis, Financial Markets	B1
7	JSPF324	Financial Reporting and Analysis	2	Financial Accounting and Financial Statement Analysis	B1
8	JSPF304	Corporate and Retail Banking	3	Principles and Practices of Banking	B1
9	JSPF317	MSME Financing	3	Principles and Practices of Banking	B1
10	JSPF329	Alternative Investments	2	Corporate Finance	B1
11	JSPF306	Business Valuation & Private Equity	2	Corporate Finance, Financial Accounting and Financial Statement Analysis	B1
12	JSPF318	Investment Banking	2	Financial Markets, Corporate Finance, Services Marketing	B1
13	JSPF330	International Finance	2	Economics for Business	B1
14	JSPF321	Student Managed Investment Fund (SMIF)*	3	Corporate Finance, Financial Accounting and Financial Statement Analysis	B1
15	JSPF311	Derivatives	3	Security Analysis and Portfolio Management	B2
16	JSPF303	Wealth Management	2	Security Analysis and Portfolio Management, Services Marketing, Alternate Investments	B2
17	JSPF307	Financial Risk Management	2	Derivatives	B3
18	JSPF333	Corporate Governance	2	None	B3
19	JSPF325	Finance Capstone Project	2	None	B3
20		Mergers & Acquisition	2	Business Valuation and Private Equity	B3

Cost and Management Accounting

Why This Course

In a dynamic business environment, informed decision-making is critical to success. This course on Accounting Decision Making is designed to empower students with the tools and techniques necessary to interpret cost and financial information effectively. Whether you're managing operations, planning budgets, or evaluating strategic alternatives, an understanding of cost behaviour and accounting analysis plays a vital role. The course focuses on cost classification, full product costing, cost-volume-profit analysis, and relevant cost for short-run decisions, all aimed at enabling smarter, data-driven business decisions.

Pre-requisites (if any): None

Competencies This Course Develops

- Mastery of cost concepts and classifications relevant to managerial decisions.
- Ability to compute full cost of products/services and allocate overhead costs accurately.
- Understanding of cost-volume-profit relationships and their implications for profitability.
- Skills in applying relevant costing to real-world decisions such as make-or-buy, pricing, and product mix.
- Proficiency in using budgets for planning and variance analysis for performance control.

The Course Will Have Significant Relevance For:

- Aspiring managers seeking to make operational and financial decisions grounded in cost data.
- Professionals involved in pricing, budgeting, and resource allocation.
- Entrepreneurs and business owners looking to enhance financial decision-making skills.
- Anyone aiming to strengthen their functional knowledge of managerial accounting in a corporate setting.

Financial Markets

Why This Course

Financial markets are the bedrock of any modern economy, serving as crucial intermediaries that facilitate the flow of capital between those who have it (savers/investors) and those who need it (businesses, governments, individuals). They enable companies to raise funds for expansion, innovation, and job creation, allow governments to finance public projects, and provide individuals with avenues to save, invest, and manage their finances. Beyond capital allocation, financial markets contribute to price discovery, liquidity, risk management (through instruments like derivatives), and overall economic stability and growth by fostering confidence, transparency, and efficient resource utilization. Without well-functioning financial markets, economic activity would be severely hampered, leading to slower growth, higher unemployment, and reduced opportunities for wealth creation.

Pre-requisites : None

Competencies this course develops

1. Understanding Financial Instruments
2. Market Structure and Functioning
3. Financial Analysis
4. Investment Management and Portfolio Construction
5. Regulatory Framework and Ethics
6. Economic and Policy Impact
7. Quantitative Skills
8. Critical Thinking and Decision Making

This course will have significant relevance for the following jobs

- Equity Research Trainee
- Management Trainee in Investment Banking
- Portfolio manager in Wealth Management Companies

Principles & Practices of Banking

Why This Course

Principles & Practices of Banking imparts fundamental understanding of the nuances of banking. Essentially, every aspirant who wants to enter into the banking sector and to put it in a more realistic way for entry into the BFSI sector, this course is a backbone course.

This is one of the courses for passing Diploma in Banking & Finance, which all the banks expect their employees to do.

For even the HR, and Sales jobs in the Banking sector, Principles & Practices of Banking course is a must to do course.

In this context a deep understanding of Principles & Practices of Banking is a must for the business school graduates planning a career not only in Banking but overall, in BFSI sector.

Pre-requisites (if any): None

Competencies this course develops

- Understanding the Indian banking system and functions of RBI. Reinforce importance of Public, Private Sector & Foreign Banks, and emergence of Small Finance Banks & Payment Banks.
- Differentiating Business Model of Public & other Private Sector Scheduled Commercial Banks from Small Finance Banks
- Understanding Banker-Customer relationship and the various types of customers-deposits such as:
 - Savings Bank account: Adults/ Minors
 - Current deposit account: Proprietorship, Partnership, LLP, Public/Private company
 - HUF account
 - Society account
- Reinforcing the significance of CASA deposits
- Understanding the provisions of the Negotiable Instruments Act for payment and collection system
- Understanding the various ancillary banking activities for the customers
- Reinforcing the sound principles of lending practices in terms of
 - Concept of Working Capital appraisal
 - Understanding the different methods of Working Capital appraisal
- Understanding the technology significance in banking services and products delivery

Jobs this Course Will Have Significant Relevance For

- Management Trainee: Private Sector banks recruit
 - Branch Operations:
 - General Banking
- Relationship Manager-Operations: Private Sector banks recruit
 - Branch Operations:
- Probationary Officers: Thousands of vacancies are filled up every year by the Public Sector banks

Rural Banking & Microfinance (FIRBMF)

Why This Course

Financial Inclusion, Rural Banking & Microfinance course builds a strong foundation for careers in banking, as all officers are required to do at least one mandatory assignment in the rural area.

This course imparts understanding of the impact of demographic features; socio-economic development indicators to create financial inclusion plans and inclusive growth.

Enhances critical thinking and decision-making— for evaluating financial needs of agriculture / allied activities such as agriculture, horticulture and fisheries. Generating plans for the revival and rehabilitation schemes for stressed Agriculture loans.

The course familiarizes with the priority sector lending, and understanding the issues & challenges of rural banking, transaction costs and risk costs.

Understanding and clarity of the Micro Finance activities, Micro Finance Institutions and regulatory guidelines are provided.

Pre-requisites (if any): None

Competencies this course develops

- Familiarizing with the Rural India - Demographic features; Socio-economic development indicators.
- Familiarizing with the Priority sector lending, challenges of rural branches of commercial banks, their transaction costs and risk costs.
- Understanding the Priority Sector Financing, Rural & Urban housing loans, Bank services, Problems in rural financing.
- Understanding Micro Finance activities & Micro Finance Institutions.

FIRBMF Jobs: This Course Will Have Significant Relevance For

- Agriculture Officer: Private Sector banks/NBFCs recruit
- Credit Officer: Private Sector banks/NBFCs recruit
- Credit Recovery Officer/ Manager-Recovery: Public/Private Sector banks, NBFCs recruit

Fundamentals of Fintech

Why This Course

Fintech is rapidly transforming the financial industry. From mobile payments and digital lending to blockchain and AI in finance, technology is disrupting traditional business models and creating new opportunities. This course will provide the students with a comprehensive overview of the Fintech landscape, covering key trends, technologies, and applications. Whether the student is interested in working for a Fintech startup, a traditional financial institution, or a technology company, this course will equip them with the knowledge and skills to navigate this dynamic field.

Pre-requisites (if any): None

Competencies this course develops

- Understanding the key concepts and trends in Fintech.
- Exploring the different segments of Fintech (e.g., payments, lending, investments).
- Analyzing the impact of technology on financial services.
- Evaluating the opportunities and challenges of Fintech innovation.
- Understanding the regulatory landscape of Fintech.
- Examining the role of data and cybersecurity in Fintech.

Jobs This Course Will Have Significant Relevance For

- Roles in Fintech companies
- Management Trainees in Digital Banking
- Management Trainees in Insuretech and Welathtech areas
- Roles in Product Management in Fintech
- Roles in Sales and Distribution in Fintech

Security Analysis & Portfolio Management

Why This Course

Have you ever wondered how investors decide which securities to invest in, or how they assess the value and risk of those investments? This course is designed to answer such questions and more. Security Analysis & Portfolio Management equips students with the tools and frameworks necessary to analyze a wide array of financial instruments and construct portfolios aligned with their investment goals.

The course introduces both theoretical and practical aspects of security valuation—spanning equity and fixed income—as well as technical and fundamental analysis. It also dives into modern portfolio theory and performance evaluation, helping students understand how professionals construct, manage, and optimize investment portfolios in real-world market conditions.

Whether you're aspiring to be a fund manager, investment analyst, or simply want to manage your own investments more effectively, this course is a critical step in your financial learning journey.

Pre-requisites (if any): Corporate Finance, Financial Accounting and Financial Statement Analysis, Financial Markets

Competencies This Course Develops

- Explain key concepts in securities analysis, market efficiency, and portfolio management
- Analyze financial statements and market data using technical and fundamental analysis
- Evaluate intrinsic value of equity and fixed income securities using valuation models
- Construct and optimize investment portfolios using Modern Portfolio Theory and CAPM
- Assess portfolio performance using risk-adjusted return metrics and benchmarking techniques

The Course Will Have Significant Relevance For:

- A role in equity or fixed income research and valuation
- Careers in investment banking, portfolio management, and financial advisory
- Professionals preparing for CFA, CFP, or similar finance certifications
- Anyone aiming to understand markets and make informed investment decisions

Financial Reporting and Analysis

Why This Course

- Analyzing financial statements using ratios and other techniques.
- Assessing a company's financial health and performance.
- Evaluating profitability, liquidity, and solvency.
- Understanding the principles of financial forecasting.

Jobs This Course Will Have Significant Relevance For

- Equity Research Trainee
- Management Trainee in Investment Banking
- Financial Planning and Analysis (FP&A)
- Portfolio manager in Wealth Management Companies

Corporate & Retail Banking

Why This Course

Corporate & Retail Banking course builds a solid foundation for careers in banking, finance, consulting, and risk management. Makes students job-ready and increases employability in private banks, public sector banks, and NBFCs.

Enhances critical thinking and decision-making—core skills in any business role. Prepares for global careers and exposure in multinational banks and global consulting firms.

Business School students stand to gain tremendously from pursuing a course in Corporate & Retail Banking. It not only opens up career opportunities but also equips them with a deep understanding of corporate & retail businesses and credit dispensation for them.

Pre-requisites (if any): Principles and Practices of Banking

Competencies this course develops

- Understanding corporate banking and types of corporate banking services
- Understanding the Current Account accounting opening formalities, and compliances while opening & operating various accounts such as:
 - Proprietorship/ Partnership Current Account
 - Public/Private company Current Account
- Reinforcing the understanding of Funds management services for corporate accounts
- Understanding the Ratio Analysis from balance sheet and profit/loss account
- Reinforcing the fund-based Credit Appraisal in terms of
 - Working Capital, Pre-shipment and post-shipment
 - Term Loan
 - Bills discounting
- Reinforcing the non-fund-based Credit Appraisal in terms of
 - Letters of Credits
 - Bank Guarantee
- Understanding the Loan Covenants, Credit risk management
- Understanding Retail banking concept and products; Retail credit appraisal and scoring

CRB Jobs: This Course Will Have Significant Relevance For

- Credit Officer-Retail/Corporate: Private Sector banks recruit
- Relationship Manager-Credit: Private Sector banks recruit
- Risk & Compliance Officer: Public/Private Sector banks recruit
- Probationary Officers: Thousands of vacancies are filled up every year by the Public Sector banks

MSME Financing

Why This Course

MSME Financing course builds a solid foundation for careers in banking & finance and for those interested in becoming entrepreneurs. Makes students increase employability in private banks, public sector banks, and NBFCs.

Course helps in understanding the issues and challenges of MSMEs. Familiarizing with various products and services available for MSMEs from Banks & Financial Institutions.

Enhances critical thinking and decision-making— Differentiating the credit management aspects for MSMEs from the conventional credit management. Generating plans for the revival and rehabilitation schemes for stressed MSMEs.

This course not only opens career opportunities but also equips them with a deep understanding of MSME world and helps build up confidence for budding entrepreneurs.

Pre-requisites (if any): Principles and Practices of Banking

Competencies this course develops

- Understanding the issues and challenges of MSMEs and the various supporting initiatives and the enablers of the Government
- Familiarizing with the various products and services available for MSMEs from Banks & Financial Institutions.
- Understanding the credit management aspects for MSMEs and ensuring various covenant compliances
- Understanding the nuances of the revival and rehabilitation schemes for stressed MSMEs
- Familiarizing with the new range of instruments for financing MSMEs New range of instruments for financing MSMEs.

MSME Financing Jobs: This Course Will Have Significant Relevance For

- Credit Officer/Credit Analyst: Private Sector banks/NBFCs recruit
- Relationship Manager-Credit: Private/Public Sector banks recruit
- Credit Recovery Officer/ Manager-Recovery: Public/Private Sector banks, NBFCs recruit

Alternative Investments

Why This Course:

In an increasingly complex and volatile financial landscape, institutional and high-net-worth investors are expanding beyond traditional equities and bonds into alternative assets that offer enhanced returns, diversification, and downside protection. This course equips MBA students with a strategic understanding of the growing world of alternative investments—spanning private equity, hedge funds, real assets, structured products, and more. With India's AIF ecosystem gaining momentum and global capital allocation shifting significantly toward alternatives, finance professionals must grasp the evolving structures, regulatory frameworks, and performance metrics that define these instruments. This course bridges academic insights and market practices, empowering students to make informed investment decisions and advise clients with credibility and confidence.

Prerequisite: Corporate Finance

Competencies This Course Develops

- **Strategic Differentiation:** Ability to clearly distinguish between traditional and alternative investments in terms of structure, risk-return profile, and investor objectives.
- **Analytical Skills:** Proficiency in evaluating diverse alternative asset classes such as private equity, real estate, REITs, commodities, private debt, hedge funds, and structured financial products.
- **Risk and Return Assessment:** Understanding of the unique risk factors and return expectations associated with various alternative investment vehicles.
- **Due Diligence Acumen:** Capability to critically assess fund structures, fee mechanisms, manager strategies, and operational challenges in the alternative investment selection process.
- **Portfolio Construction Insight:** Knowledge of the role and weightage of alternative investments in institutional and high-net-worth portfolios for risk-adjusted return enhancement.
- **Regulatory and Market Knowledge:** Familiarity with the Indian AIF regulatory framework (Categories I, II, III) and global market trends, enabling practical application in a localized and international context.

Jobs This Course Will Have Significant Relevance For

- Wealth management roles with wealth management firms and mutual funds
- Relationship managers for HNIs at banks
- Investment management / analysis roles with GCCs

Business Valuation & Private Equity

Why This Course

Each one of us is either an employee with a corporate or runs a business. Have we ever wondered what is the value of the business we are associated with? Have we thought about how do we go about figuring out the value? Have we thought about why we may need to even think about its value? This course answers such questions and more. Value of a business is a concept that is essential to understand and grasp as one moves up the ladder in the corporate world. This course will take you through the various methodologies that help you estimate the value of a business.

Private Equity as a concept is key to the world of finance and today a role in a Private Equity firm is one of the most sought after. This course not only introduces to the concept of Private equity but also prepares you for world of Private Equity. The course allows you to evaluate the concept of Private Equity as an asset class.

Pre-requisites (if any): Corporate Finance, Financial Accounting and Financial Statement Analysis

Competencies this course develops

- Allows a deep understanding of and application of both market approach and income approach to valuation.
- Reinforce & expand the fundamental concepts of Business Model and Financial Model.
- Reinforce & expand the fundamental concepts of Cost of Capital and its applications in the real world.
- Understand the concept and application of free cash flow for use in Discounted cashflow Analyses.
- Enables a student to appreciate and participate in establishing and running a Private equity Fund.
- Enables a student to appreciate and participate in valuation of businesses – as a corporate employee, a business owner, investment banker or as a valuation expert.

The course will have significant relevance for;

- A corporate role with opportunities in fund raising, mergers, acquisitions and divestitures.
- A role in an investment banking firm both buy & sell side
- A role in a Private Equity firm as an Investment Analyst

Investment Banking

Why Take This Course?

Investment Banking is one of the most dynamic and influential sectors in the world of finance. From taking companies public to advising on multi-billion-dollar mergers, investment banks sit at the heart of capital markets and corporate strategy. This course opens the doors to understanding what investment bankers do, how deals are structured, and how value is created (or destroyed) in the process.

Whether you're aiming for a role in M&A advisory, capital markets, private equity, or corporate development, this course will give you a front-row view of the tools, techniques, and real-world dynamics of the investment banking universe. The course also provides a hands-on perspective on how generative AI is transforming the way pitchbooks, valuations, and deal materials are created.

Pre-requisites (if any): Corporate Finance, Financial Markets, Services Marketing

Competencies Developed in This Course

- Build a foundational understanding of the structure, evolution, and operations of investment banks.
- Analyze and evaluate equity, debt, and M&A transactions.
- Understand deal-making dynamics including public takeovers and private placements.
- Learn the practical integration of generative AI tools in preparing pitchbooks and transaction materials.

Relevance and Career Linkages

This course is especially relevant for roles in:

- Roles in investment banking, corporate finance, equity capital markets (ECM), and debt capital markets (DCM).
- Positions in M&A advisory, transaction services, or private equity.
- Corporate strategy or business development roles in large organizations.

International Finance

Why This Course

In today's globalized economy, businesses operate across borders, dealing with multiple currencies, financial regulations, and risks unique to international markets. Understanding the international financial environment is crucial for managers to make informed decisions about investments, financing, and risk management in a global context.

This course equips students with the tools to navigate the complexities of international finance, including foreign exchange markets, parity conditions, multinational financial management, and institutional frameworks such as the IMF and World Bank. Students will learn how to evaluate foreign investments, manage currency risks, and leverage global capital markets to support corporate strategy and growth.

By the end of the course, students will be prepared to manage financial decisions for businesses operating in an increasingly interconnected world.

Pre-requisites (if any): Economics for Business

Competencies this course develops

- Analyze the international financial environment and its implications for multinational corporations
- Understand and apply foreign exchange concepts, including exposure types, spot and forward rates, and risk management techniques
- Explain and evaluate purchasing power parity, interest rate parity, and their impact on decision-making
- Perform basic calculations and interpret transactions in the forex markets
- Appraise international projects using tools of multinational financial management, including capital budgeting, transfer pricing, and project financing
- Critically assess the roles of global institutions (e.g., IMF, World Bank) and agreements (e.g., Bretton Woods) in shaping international finance

The course will have significant relevance for

- Corporate Finance in Multinational Firms: Foreign investment analysis, risk management, treasury operations
- Global Banking and Financial Services: Forex trading, international lending, trade finance
- Consulting and Advisory: Advising on global financial strategy, FDI, and cross-border financing
- Risk and Compliance: Managing currency risks, adhering to international financial regulations
- Investment and Asset Management: Managing international portfolios, understanding global capital flows

Student Managed Investment Fund

Why This Course

Student Managed Investment Fund (SMIF) course is a highly specialized and invaluable experiential learning opportunity for students aspiring to careers in finance, particularly in investment management, asset management, and financial analysis. Its importance stems from bridging the crucial gap between academic theory and real-world application. Instead of just studying hypothetical scenarios, students actively manage a live portfolio with real money (often part of a university's endowment), making actual investment decisions and experiencing the tangible consequences of those decisions. This "learning by doing" approach replicates the dynamics of a professional investment firm, providing unparalleled practical exposure that is highly sought after by employers.

Pre-requisites: Corporate Finance and Financial Accounting and Financial Statement Analysis

Competencies this course develops

- Investment Analysis & Due Diligence:
- Fundamental Analysis
- Industry and Sector Research
- Qualitative Analysis
- Portfolio Management & Strategy:
- Asset Allocation
- Portfolio Construction
- Risk Management
- Performance Measurement & Attribution
- Critical Thinking & Decision Making
- Communication & Presentation Skill
- Teamwork & Collaboration
- Professionalism & Ethics

This course will have significant relevance for the following jobs

- Equity Research Trainee
- Management Trainee in Investment Banking
- Portfolio manager in Wealth Management Companies
- Financial Planning and Analysis

Derivatives

Why Derivatives?

In the world of modern finance, risk is a given—and managing it is a necessity. Derivatives are powerful financial instruments that help businesses and investors manage this uncertainty strategically. They play a critical role in navigating and managing fluctuations in stocks, currency, commodities, and interest rate volatility.

As companies expand globally, managers must make sound decisions about hedging, pricing, and risk protection. This course equips students with the analytical tools and strategic mindset needed to operate in today's complex financial landscape.

Designed for those pursuing careers in capital markets, risk management, trade settlement services etc., the course is essential and bridges financial theory with market application. Students learn how to evaluate financial risk and apply derivatives to hedge exposure and enhance decision-making. They will also learn various future and option strategies' and their payoff to enhance their understanding of financial markets

Prerequisites: Security Analysis and Portfolio Management

Competencies This Course Develops

- Understanding how derivative instruments are used for hedging, speculation, and arbitrage.
- Building advanced financial decision-making skills under uncertainty.
- Applying theoretical models practically to real-world pricing and trading scenarios.
- Assessing and managing market risks across domestic and international markets.

Finance Careers This Course Will Have Significant Relevance For

- Corporate Finance and banks: Treasury, Risk Management, currency hedging
- Financial Services: Equity & Derivative Research and analysis, Trading and hedging in index, and commodity derivatives
- Consulting: Strategy, Risk Advisory, Financial Modeling, trade settlements
- Markets & Analytics: Trading, Quantitative Research, Asset Management, hedge funds

Wealth Management

Why This Course

The importance of a wealth management course lies in its ability to equip individuals with the specialized knowledge and practical skills necessary to navigate the complex world of personal finance, particularly for affluent clients. In an increasingly intricate financial landscape, a dedicated wealth management curriculum provides a comprehensive understanding of investment strategies, tax planning, estate planning, risk management, and philanthropic considerations. This holistic approach empowers graduates to offer tailored, strategic advice that goes beyond basic financial planning, helping clients not only preserve and grow their assets across generations but also achieve their unique long-term financial goals, ultimately contributing to their peace of mind and financial legacy.

Pre-requisites: Security Analysis and Portfolio Management, Services Marketing, Alternate Investments

Competencies this course develops

- Holistic Financial Planning
- Investment Management and Asset Allocation
- Tax Planning and Optimization
- Estate Planning and Wealth Transfer
- Risk Management and Insurance Planning
- Retirement Planning
- Client Relationship Management (CRM) & Communication
- Behavioral Finance
- Regulatory Compliance & Ethics
- Problem-Solving and Customization
- Financial Technology (FinTech) Literacy
- Market Awareness and Research

This course will have significant relevance for the following jobs

- Equity Research Trainee
- Management Trainee in Investment Banking
- Portfolio manager in Wealth Management Companies

Financial Risk Management

Why this course?

In today's risk-sensitive financial landscape, Financial Risk Management is a vital function across banks, NBFCs, and financial institutions. This course provides a strong foundation in credit and market risk analytics, preparing students for roles in loan underwriting, credit assessment, and risk monitoring.

With hands-on training in Excel and R, students apply techniques like Monte Carlo simulation, derivative pricing, and Greeks calculation to real-world financial data. They learn to assess default probabilities, counterparty risk, and portfolio exposures.

Designed with a focus on the Indian and Asian markets, the course equips students for roles in credit scoring, wholesale credit, and market risk analytics, aligning with regulatory and institutional needs for effective risk management.

Prerequisite: Derivatives

Competencies This Course Develops

- Credit Risk Modeling: Estimating default probabilities and exposure metrics for loans, bonds, and credit portfolios
- Market Risk Analytics: Measuring value-at-risk (VaR), sensitivities (Greeks), and scenario analysis
- Technical Proficiency: Application of Excel and R for risk computation and data analysis
- Quantitative Thinking: Use of simulations and advanced models to forecast and manage financial risks
- Regulatory Awareness: Understanding of risk capital, Basel norms, and stress-testing requirements
- Decision Support Skills: Translating risk insights into actionable recommendations for portfolio and credit decisions

Finance Careers- this course will have significant relevance for students seeking careers in:

- Credit Risk Analytics and Scoring (Retail & Wholesale)
- Market Risk Management (Trading Desk Risk, Treasury Risk)
- Risk Reporting and Regulatory Compliance (Basel/IFRS/Stress Testing)
- Quantitative Risk Modeling
- Investment Risk Management (Mutual Funds, AMCs, Wealth Firms)
- Corporate Credit Ratings and Loan Evaluation
- Risk Advisory and Consulting Roles (Big 4, FinTechs, and Global Banks)
- Portfolio Risk and ALM (Asset Liability Management)

Course Brief: Corporate Governance

Why This Course

Corporate Governance course is paramount in today's business world because it provides the foundational understanding of the systems, principles, and practices by which companies are directed and controlled. In an era where corporate scandals, ethical breaches, and a lack of accountability can severely damage reputation, investor confidence, and even lead to corporate collapse, strong corporate governance is no longer just a legal requirement but a strategic imperative. The course emphasizes transparency, fairness, accountability, and responsibility, ensuring that a company's leadership acts in the best interests of all stakeholders – including shareholders, employees, customers, suppliers, and the wider community. By fostering ethical decision-making, effective risk management, and long-term sustainability, a corporate governance course equips future leaders to build resilient organizations that attract investment, maintain public trust, and contribute positively to society.

Pre-requisites: None

Competencies this course develops

- Understanding of Governance Frameworks and Principles
- Ethical Decision-Making
- Risk Management and Compliance requirements and internal policies.
- Financial Oversight and Reporting
- Accountability and Transparency
- Legal and Regulatory Awareness
- Crisis Management

This course will have significant relevance for the following jobs

- Equity Research Trainee
- Management Trainee in Investment Banking
- Portfolio manager in Wealth Management Companies
- Financial Planning and Analysis

Finance – Capstone Project

Why This Course

The Finance Capstone Project is the culmination of your learning journey, offering an opportunity to apply knowledge from across the finance curriculum to a real-world or simulated business challenge. Whether your interest lies in corporate finance, fintech, investment banking, ESG finance, wealth management, or public finance, this project provides a platform to explore, analyze, and solve a problem of your choosing under faculty guidance.

Working individually and in groups, you will develop a well-structured project that includes problem framing, conceptual modeling, data analysis, and actionable recommendations. Emphasizing the principles of “learning by solving,” the capstone builds critical thinking, analytical rigor, and communication skills vital for finance professionals.

Pre-requisites (if any): None

Competencies this course develops

- Identify and frame a relevant problem or opportunity grounded in real-world business or policy contexts.
- Design and execute a structured approach using appropriate models, tools, and data to develop a solution for the problem
- Communicate insights effectively through a well-organized report and presentation.

Career Relevance

The Capstone Project helps bridge the classroom and the industry. It allows students to demonstrate domain expertise, analytical thinking, and project execution capabilities—key attributes for careers in corporate finance, consulting, investment research, fintech, public finance, and more.

Mergers and Acquisitions

Why Take This Course?

Mergers and Acquisitions (M&A) lie at the intersection of corporate strategy, finance, and capital markets. From billion-dollar public takeovers to strategic spinoffs and LBOs, M&A is one of the most high-stakes and intellectually stimulating areas of finance. This course offers a deep dive into the mechanics, valuation, strategy, and deal execution processes that define successful M&A transactions.

You will learn to think like both a buyer and a seller—understanding the rationale behind deals, the role of advisors, how synergies are evaluated, and how value is created (or destroyed) post-transaction. Through rich case studies and analytical exercises, the course equips you with the skills to assess, structure, and pitch M&A deals in real-world contexts.

Pre-requisites (if any): Business Valuation and Private Equity

Competencies Developed in This Course

- Develop a structured understanding of the M&A landscape, transaction types, and deal logic.
- Analyze M&A transactions using valuation frameworks including synergy valuation, accretion/dilution, and LBO models.
- Evaluate the strategic role of M&A in corporate growth, restructuring, and capital allocation.
- Understand the end-to-end process of a transaction—from due diligence and documentation to integration and defense strategies.

Relevance and Career Linkages

This course is especially relevant for roles in:

- M&A advisory within investment banking and boutique advisory firms.
- Corporate development or strategy roles in large organizations and conglomerates.
- Private equity and venture capital firms focused on buyouts or strategic acquisitions.

Learning & Development

Why This Course

Learning and Development (L&D) plays a strategic role in enhancing individual performance and driving organizational success. For Business Management students, this course provides essential insights into designing effective training programs, aligning learning initiatives with business goals, and using L&D as a tool for talent retention and organizational growth. Students will explore learning theories, training design, ROI evaluation, and the role of technology in modern learning environments. By the end of the course, they will be equipped to develop simple and impactful L&D plans tailored to specific business needs and competencies.

Pre-requisites (if any): OB & HRM Core Course

Competencies this course develops include ability to:

- Integrate key learning theories into workplace learning strategies
- Use L&D as a strategic tool for employee engagement and retention
- Conduct training needs analysis (TNA) and design instructional plans
- Create simple learning and development plans for individuals or teams
- Measure and communicate ROI of L&D initiatives using human capital metrics
- Leverage digital platforms and social media for modern L&D delivery

This Course Will Have Significant Relevance For:

- Learning & Development Specialists – Design and implement effective training initiatives aligned with business strategy.
- HR Business Partners – Use L&D to support strategic workforce planning and enhance employee performance.
- Talent Management Professionals – Develop targeted learning plans to build future leadership pipelines.
- Organizational Development Consultants – Facilitate change and growth through customized learning interventions.
- Training Managers and Instructional Designers – Plan, deliver, and evaluate impactful learning programs.
- Line Managers responsible for team capability development – Identify team skill gaps and support continuous learning at the ground level.

Learning & Development

Why This Course

Learning and Development (L&D) plays a strategic role in enhancing individual performance and driving organizational success. For Business Management students, this course provides essential insights into designing effective training programs, aligning learning initiatives with business goals, and using L&D as a tool for talent retention and organizational growth. Students will explore learning theories, training design, ROI evaluation, and the role of technology in modern learning environments. By the end of the course, they will be equipped to develop simple and impactful L&D plans tailored to specific business needs and competencies.

Pre-requisites (if any): OB & HRM Core Course

Competencies this course develops include ability to:

- Integrate key learning theories into workplace learning strategies
- Use L&D as a strategic tool for employee engagement and retention
- Conduct training needs analysis (TNA) and design instructional plans
- Create simple learning and development plans for individuals or teams
- Measure and communicate ROI of L&D initiatives using human capital metrics
- Leverage digital platforms and social media for modern L&D delivery

This Course Will Have Significant Relevance For:

- Learning & Development Specialists – Design and implement effective training initiatives aligned with business strategy.
- HR Business Partners – Use L&D to support strategic workforce planning and enhance employee performance.
- Talent Management Professionals – Develop targeted learning plans to build future leadership pipelines.
- Organizational Development Consultants – Facilitate change and growth through customized learning interventions.
- Training Managers and Instructional Designers – Plan, deliver, and evaluate impactful learning programs.
- Line Managers responsible for team capability development – Identify team skill gaps and support continuous learning at the ground level.

HR Metrics and Score Card

Why This Course

As businesses become increasingly data-driven, understanding and leveraging HR metrics has become vital for strategic decision-making. This course empowers Business Management students with the skills to connect organizational performance with workforce data. It enables them to apply key HR metrics, design performance indicators, and evaluate HR ROI in real world contexts. Through hands-on analysis of dashboards, predictive models, and digital tools, students will gain the ability to transform raw data into strategic insights. The course emphasizes the role of HR analytics in shaping talent strategies and aligning workforce performance with long-term business objectives, preparing students to contribute effectively to organizational success.

Pre-requisites (if any): OB & HRM Core Course

Competencies this course develops include ability to:

- Apply HR metrics to real-world business problems
- Interpret and present HR data to support strategic decisions
- Design key performance indicators for various HR functions
- Measure the ROI of HR programs and practices using quantitative tools
- Use digital tools and analytics to support data-driven HR decisions
- Understand predictive modeling and its application in talent management

This Course Will Have Significant Relevance For

- HR Analysts – Collect, interpret, and communicate workforce data to drive business impact.
- HR Business Partners – Align HR practices with business strategy using measurable outcomes.
- Workforce Planning Specialists – Use data to forecast talent needs and optimize workforce deployment.
- Compensation and Benefits Managers – Analyze ROI and effectiveness of rewards programs through metrics.
- People Analytics Professionals – Develop predictive models and dashboards for data-driven HR decisions.
- Strategy Consultants – Integrate HR insights into broader organizational strategy and transformation efforts.

OD and Change Management

Why This Course

Studying Organizational Development (OD) and Change Management is essential for anyone looking to lead or support transformation within a modern organization. As change becomes a constant in today's fast-paced business environment, this course equips individuals with the tools and strategies to navigate and manage transitions effectively. It deepens understanding of human behavior and organizational dynamics, enhances leadership and strategic thinking, and provides practical frameworks such as Kotter's 8-Step Model and Lewin's Change Theory. Whether you're in HR, management, consulting, or project leadership, mastering change management increases your value in the workplace and opens doors to diverse career opportunities. Ultimately, it empowers you to become a confident, capable change agent who drives sustainable growth and fosters a positive, adaptive organizational culture.

Pre-requisites (if any): Human Resource Management Core Course

Competencies this course develops include ability to:

- Analyze organizational needs and align change initiatives with strategic and sustainable goals.
- Apply change management models to lead transitions and address resistance effectively.
- Design and evaluate organizational structures, systems, and culture to support change.
- Communicate change clearly and influence stakeholders across all organizational levels.
- Lead, coach, and mentor teams through change to build resilience and engagement.
- Facilitate workshops and interventions to support individual and organizational development.

This Course Will Have Significant Relevance For

1. Organizational Development Specialist / Consultant
2. Change Management Specialist / Consultant
 - Leads or supports change initiatives, focusing on people, communication, and adoption strategies.
3. Human Resources Manager / HR Business Partner
 - Aligns HR strategies with organizational goals and supports change from a people and culture perspective.
4. Leadership Coach / Executive Coach
 - Helps leaders navigate change, develop adaptive leadership skills, and support their teams through transitions.

HR Analytics and Data Driven Decision Making

Why This Course

In today's data-driven workplace, Human Resource professionals are no longer seen merely as people managers—they are expected to be strategic partners who can interpret, analyze, and act on workforce data. From improving recruitment efficiency to reducing attrition and enhancing employee engagement, HR Analytics equips future leaders with the tools to solve real business challenges through data. As organizations undergo digital transformation, the demand for HR professionals with analytical acumen and business insight is rapidly increasing. This course is designed to help you navigate that shift—bridging traditional HR practices with modern analytics to enable evidence-based decision making. Whether your ambition lies in talent strategy, L&D, total rewards, or HR business partnering, a deep understanding of analytics will not only differentiate you in the job market but also empower you to drive meaningful organizational impact from day one.

Pre-requisites (if any): Human Capital Management / Organizational Behavior Core Course
Competencies this course develops

- Data Literacy in HR Context: Understanding types of HR data (structured/unstructured), sources (internal/external), and their relevance to HR decisions.
- HR Metrics and KPIs: Defining, calculating, and interpreting critical metrics for areas like recruitment, performance, learning, rewards, and retention.
- Business Acumen for HR: Linking people data to business outcomes using evidence-based HR practices.
- Storytelling with Data: Translating HR insights into actionable strategies using dashboards, visualizations, and executive reports.
- Predictive and Prescriptive Analytics: Introduction to predictive models for attrition, promotion readiness, or high-potential identification using regression, classification, clustering, and AI-based tools.
- Tool Familiarity: Exposure to Excel-based modeling, Power BI/Tableau, and foundational knowledge of R or Python for HR data analysis.
- Ethics and Compliance in People Analytics: Understanding data privacy, ethical boundaries, and legal considerations while handling employee data.
- Change Management: Influencing HR decision-making and driving adoption of analytics-based solutions across the organization.

Performance Management

Why This Course

Performance Management is crucial for MBA students, particularly those specializing in HR, as it forms the backbone of organizational effectiveness. It's more than just annual appraisals; it's a continuous process of aligning individual and organizational goals, fostering employee development, and driving performance. Organizations increasingly recognize that their people are their greatest asset. As the Harvard Business Review states, "To win in the marketplace...you must first win in the workplace."

Effective performance management helps achieve this by:

- Aligning individual efforts with organizational objectives: Ensuring everyone works towards the same goals.
- Driving employee development: Identifying areas for improvement and facilitating growth.
- Improving communication: Fostering a culture of feedback and transparency.
- Enhancing accountability: Setting clear expectations and measuring results.

In India, the demand for skilled HR professionals with expertise in performance management is rising. A study indicates a growing need for HR roles, with performance management being a key skill. Companies like Infosys, Tata Consultancy Services (TCS), and Reliance Industries emphasize robust performance management systems to maintain their competitive edge. These systems drive productivity, retain top talent, and ensure that employees' contributions directly support the company's strategic objectives.

"Performance management is a continuous process of setting objectives, assessing progress and providing ongoing coaching and feedback to ensure that employees are meeting their objectives and the organization's goals." - SHRM

PGDM graduates with a strong grasp of performance management principles are well-equipped to design, implement, and optimize these systems, making them invaluable assets to any organization.

Pre-requisites (if any): Human Resource Management

Competencies this course develops

- Ability to align performance management systems with organizational strategy and business objectives.
- Skill in designing, selecting, and applying effective Key Performance Indicators (KPIs) for diverse job roles.
- Capability to use competency models and behavioural indicators for evaluating and improving employee performance.
- Proficiency in observing, documenting, and assessing employee behaviours accurately and objectively.
- Ability to deliver structured, constructive feedback and engage in development-oriented coaching conversations.
- Capacity to identify and manage ethical issues, bias, and fairness in performance

evaluation processes. • Skill in linking performance outcomes with compensation, incentives, and recognition systems.

- Proficiency in using tools like 360-degree feedback for holistic performance appraisal.
- Competence in designing and adapting performance systems for digital and future-ready workplaces.
- Ability to work effectively in teams, reflect on one's own development, and contribute to collective learning through peer engagement.

Jobs This Course Will Have Significant Relevance For

1. Human Resource Business Partner
2. Talent Management Specialist
3. Performance Management Analyst / Specialist
4. Learning and Development (L&D) Manager
5. Compensation and Benefits Analyst
6. HR Generalist / Executive
7. Organizational Development (OD) Consultant
8. Employee Engagement Specialist
9. HR Technology Consultant / HRIS Analyst
10. Corporate Trainer / Internal Coach

Managerial Psychology & Leadership (MPL)

Why This Course

Successful leadership today requires not just strategic thinking but deep psychological insight into human behavior and influence. This course introduces Business Management students to the psychological underpinnings of leadership, emotion, communication, and decision-making. By exploring how thoughts and emotions drive workplace behavior, students gain tools for reflection, empathy, and positive influence. The course covers emotional communication, Cialdini's principles of influence, the art of storytelling, and negotiation psychology, all reinforced through practice-based learning. Fieldwork and simulations further allow students to connect leadership theory to real-world interpersonal challenges—making them emotionally intelligent, persuasive, and self-aware leaders of tomorrow.

Pre-requisites (if any): OB and HR Core Course

Competencies this course develops include ability to:

- Apply psychological concepts to influence, motivate, and lead effectively
- Reflect on personal leadership behavior and its impact on others
- Use storytelling and emotional intelligence in business communication
- Understand and apply principles of influence and persuasion
- Navigate negotiation and decision-making using behavioral insights
- Lead community and team-based engagement with empathy and clarity

This Course Will Have Significant Relevance For:

- People Managers – Build trust and influence teams using empathy and emotional awareness.
- Marketing Professionals – Leverage psychological cues and storytelling to connect with consumers.
- Entrepreneurs and Founders – Inspire and influence stakeholders through vision and behavior.
- Sales and Business Development Executives – Apply persuasion techniques to influence client decisions.
- Organizational Change Agents – Lead transformation initiatives with psychological insight and strategic empathy.
- Learning and Development Facilitators – Design training rooted in behavioral change and experiential learning.

Total Rewards Management

Why This Course

An effective total rewards strategy is essential to attracting, motivating, and retaining talent in a competitive marketplace. This course introduces Business Management students to the core concepts of compensation, benefits, and strategic alignment with business goals. Students will explore both internal and external alignment of pay, analyze compensation structures, and evaluate reward systems for diverse and global workforces. With a blend of theoretical insight and practical tools, the course helps students design market-competitive pay structures and understand the logic behind pay-for-performance, job evaluation, and benefits planning. It prepares future managers to make informed and strategic compensation decisions that contribute directly to organizational success.

Pre-requisites (if any): None

Competencies this course develops include ability to:

- Understand the full scope of total rewards and their impact on performance
- Align compensation strategies with broader business goals
- Analyze and design job-based and person-based pay structures
- Evaluate internal and external equity in compensation
- Apply job evaluation techniques and develop competitive compensation systems
- Understand global and performance-linked reward models

This Course Will Have Significant Relevance For (Roles):

- Compensation & Benefits Managers – Design fair and competitive pay systems aligned with strategic objectives.
- HR Business Partners – Align reward programs with workforce needs and business performance.
- Talent Acquisition Professionals – Offer compelling compensation packages to attract top talent.
- Total Rewards Analysts – Evaluate market data and compensation trends to support pay decisions.
- Global HR Managers – Navigate international compensation frameworks and cross-border pay practices.
- Business Leaders and Line Managers – Make informed decisions about pay and recognition to drive motivation and retention.

Technology Driven HR

Why This Course

In the digital era, HR is evolving from a support function to a strategic partner through the adoption of cutting-edge technologies. This course equips Business Management students with the knowledge and tools to lead digital HR transformation, aligning HR strategy with business goals. Students will explore HR maturity models, digital tools, analytics, and design thinking to improve employee experience and workforce performance. The course also emphasizes ethical and compliance challenges in data management, preparing students to navigate cybersecurity, data privacy, and the ethical use of HR technology. By the end of the course, students will be capable of evaluating, implementing, and optimizing digital solutions in HR functions.

Pre-requisites (if any): OB & HR Core Course

Competencies this course develops include ability to:

- Understand the strategic relevance of digital HR in business transformation
- Evaluate and adopt emerging HR technologies
- Use design thinking to solve employee experience challenges
- Align HR analytics with organizational goals and digital maturity
- Address ethical, legal, and security concerns in digital HR environments
- Develop digital readiness and innovation-oriented HR capabilities

This Course Will Have Significant Relevance For (Roles):

- HR Technology Consultants – Design and implement digital HR solutions aligned with strategy.
- People Analytics Specialists – Use data-driven insights to enhance workforce decisions.
- Digital Transformation Leaders – Drive HR modernization as part of enterprise change.
- Employee Experience Designers – Apply design thinking to create human-centered HR processes.
- Cybersecurity and Compliance Officers in HR – Manage ethical and secure use of employee data.
- HR Business Partners in Tech-Forward Organizations – Integrate digital tools to improve HR delivery and impact.

HR Business Partner

HRBP is a job role normally filled by an HR manager. These managers are at the front line of the business unlike other HR role holders. They integrate business strategy with people management practices. Business acumen and HR process knowledge are equally important for this job holder. They look at every HR process through the eyes of business strategy. For example, how to develop capability to deliver the strategy, how to create recruitment system or Total Reward Management to achieve the strategic goals. In order to link oneself well with business strategy, the HRBP role holder is required to understand strategy, key metrics that drive strategy and how the HR metrics enable strategic implementation. HRBP is a pinnacle course because without their contribution, organizations would be reduced to entities that have no capability to execute strategy.

The technical competencies this course will develop are:

- Ability to understand business strategy and interpret it in terms of execution using HR as a resource.
- Creating metrics that matter to the organization.
- Creating a HR strategic plan to implement business strategy.

Assessment Center and Psychometric Testing

Why This Course

Performance management is a cornerstone of organizational effectiveness, and modern businesses demand fair, transparent, and strategically aligned systems. This course introduces Business Management students to the foundations and practical applications of performance management through the lens of assessment centers and related tools. It covers goal-setting frameworks, continuous feedback practices, and the integration of performance with learning, development, and rewards. Students will also explore fairness, bias, and the ethical use of technology in performance assessments. Through hands-on learning and scenario-based discussions, this course prepares students to manage and evaluate performance effectively in dynamic and diverse work environments.

Pre-requisites : OB & HR Core Course

Competencies this course develops include ability to:

- Understand performance management systems and their strategic purpose
- Design goal-setting and feedback frameworks aligned with business goals
- Conduct fair and effective performance appraisals and conversations
- Link performance outcomes to learning, development, and compensation
- Recognize and address bias and fairness in performance processes
- Use technology to support performance evaluation and improvement

This Course Will Have Significant Relevance For :

- Performance Management Specialists – Build effective systems for goal alignment and feedback.
- HR Business Partners – Coach managers on performance conversations and continuous development.
- Learning & Development Professionals – Integrate performance outcomes into training initiatives.
- Compensation & Rewards Analysts – Align pay and rewards with validated performance data.
- Organizational Development Consultants – Evaluate and enhance fairness and effectiveness of performance systems.
- People Managers – Drive team success through structured performance reviews and feedback practices.

Employee Relations and Labour Laws

Why This Course

Navigating the dynamic and regulated landscape of employee relations is essential for every business leader. This course provides Business Management students with a comprehensive understanding of industrial relations, labour law frameworks, and the evolving nature of employee engagement in India's professional landscape. It focuses on the practical implications of statutes, the principles of natural justice, grievance redressal, and compliance management. Students will gain insights into key legislations and their real-world applications in disciplinary proceedings, union negotiations, and maintaining legally sound employer employee relationships. This course equips future managers with the knowledge and confidence to handle workplace relations within ethical and legal boundaries.

Pre-requisites (if any): OB & HR

Competencies this course develops include ability to:

- Understand and apply key concepts in employee and industrial relations
- Interpret and implement vital labour laws affecting business operations
- Handle disciplinary actions based on fairness and principles of natural justice
- Manage grievance procedures and promote workplace harmony
- Ensure statutory compliance in HR and management decisions
- Navigate regulatory complexities in modern employment settings

This Course Will Have Significant Relevance For :

- Employee Relations Managers – Mediate and resolve workplace conflicts within legal frameworks.
- HR Compliance Officers – Ensure adherence to statutory obligations and legal standards.
- Industrial Relations Officers – Manage negotiations and disputes with trade unions and employee bodies.
- HR Business Partners – Support ethical employee engagement while aligning with labour laws.
- Legal and Labour Law Advisors – Provide consultation on regulatory risks and employee-related legal matters.
- Line Managers in Industrial Settings – Maintain compliant and positive relations with shop-floor employees.

Employee Experience & Employer Branding

Why This Course

In a talent-driven economy, organizations that prioritize employee experience gain a competitive edge in attracting and retaining high-performing talent. This course equips Business Management students with the tools and frameworks to understand and enhance the employee journey—from wellness and engagement to internal culture and employer brand positioning. Students will explore strategies for promoting well-being, psychological safety, and building a strong employer value proposition (EVP). With a focus on integrating internal culture with external branding, the course prepares future leaders to design initiatives that connect employee experience with business performance, reputation, and sustainable talent practices.

Pre-requisites (if any): OB & HR Core Course

Competencies this course develops include ability to:

- Understand the key drivers of employee experience and their business impact
- Promote workplace well-being and psychological safety
- Align internal culture with external employer branding strategies
- Design experience-enhancing programs that support engagement and retention
- Evaluate the effectiveness of wellness and branding initiatives
- Use internal advocacy to build and promote a strong employer value proposition

This Course Will Have Significant Relevance For :

- Employee Experience Managers – Shape the employee journey to foster engagement and well-being.
- Employer Branding Specialists – Build and communicate a compelling employer identity to the talent market.
- HR Business Partners – Align employee experience with business needs and engagement strategies.
- Corporate Communication Professionals – Promote internal advocacy and consistent brand messaging.
- Wellness and Culture Consultants – Design programs that support health, inclusion, and culture building.
- Talent Acquisition Professionals – Use employee experience insights to attract top talent authentically.

Human Resource Capstone Project

Why This Course

The HR Capstone Project offers Business Management students a hands-on opportunity to synthesize their HR knowledge and apply it to solve real-world organizational problems. Acting as consultants, students will tackle complex challenges by drawing from multiple HR domains such as staffing, performance management, analytics, and change management. The course emphasizes critical thinking, collaboration, and communication, culminating in a final presentation to stakeholders. It bridges academic learning with industry expectations, empowering students to deliver data-driven, strategic HR solutions while refining their leadership and consulting skills. This experience ensures they graduate with practical readiness and a portfolio-worthy project.

Pre-requisites (if any): Completion of foundational HR and strategy-related coursework is recommended.

Competencies this course develops include ability to:

- Integrate HR knowledge across functional areas to solve complex problems
- Conduct HR diagnostics using research, analytics, and stakeholder feedback
- Apply HR concepts in a consulting context with a strategic lens
- Collaborate effectively in a project team setting
- Communicate strategic HR recommendations to diverse stakeholders
- Develop structured reports and presentations based on real-life data and findings

This Course Will Have Significant Relevance For:

- HR Consultants – Provide evidence-based solutions to organizational HR challenges.
- Strategic HR Business Partners – Align HR strategies with business goals through data and diagnostics.
- Talent Strategy Specialists – Translate organizational problems into HR interventions and growth initiatives.
- People Analytics Professionals – Use data to inform HR decision-making and recommendations.
- Organizational Development Practitioners – Design and present change-oriented HR solutions to leadership.
- Future CHROs and HR Leaders – Practice strategic problem-solving, stakeholder engagement, and decision-making.

Consumer Behaviour

Why This Course

Understanding consumer behaviour is central to effective marketing. This course delves into the psychological, social, cultural, and contextual factors that drive consumer decisions. It equips students with analytical tools and frameworks to interpret consumer motivations and behaviors and use these insights to craft relevant and impactful marketing strategies. The course enables future marketers to anticipate consumer needs, shape product and communication strategies, and build customer-centric brands.

Pre-requisites (if any): Marketing Management (core course)

Competencies this course develops

Consumer Psychology – Understanding how individuals perceive, learn, and make decisions. Covers motivation, personality, attitudes, and perception.

Cultural and Social Influence – Exploring how culture, subculture, social class, family, and group dynamics influence consumer behaviour.

Decision-Making Processes – Analyzing how consumers make purchase decisions, from need recognition to post-purchase evaluation.

Behavioural Research & Interpretation – Applying qualitative and quantitative research to uncover consumer insights.

Customer Journey Mapping – Visualizing and analyzing the end-to-end experience of the consumer with the brand or product.

Jobs this course is most relevant to

Especially suited for marketing roles that involve customer insight, strategy, and engagement.

- **Consumer Insight/Market Research** – Analyzing consumer data to inform strategic decisions.
- **Product Management** – Developing offerings aligned with customer needs and behaviors.
- **Brand & Marketing Strategy** – Designing marketing strategies grounded in consumer understanding.

Brand Management & Marcom

Why This Course

In a marketplace cluttered with messages and competing products, building strong brands and effective marketing communication are critical to business success. The brand is a powerful asset for any business. This course empowers students with the tools and frameworks to build, manage, and communicate compelling brands. Learners will explore how to craft impactful brand strategies, create integrated marketing communication plans, and drive consumer engagement across touchpoints.

Pre-requisites (if any): Marketing Management (core course)

Competencies this course develops

Brand Strategy – Understanding brand benefits, brand assets, positioning, personality, brand architecture and brand health metrics to build differentiated and consistent brands. As well as learning how to refresh and revitalize brands.

Marketing Communication – Planning integrated and effective communication strategies across touchpoints

Consumer Insight – Applying behavioral and psychological insights to shape effective messaging and brand experiences.

Storytelling & Content Creation – Crafting narratives and content that resonate with audiences and reinforce brand equity.

Jobs this course is most relevant to

Especially suited for roles in marketing, branding, and communications that require a deep understanding of consumers and brands.

- **Brand Management** – Managing brand equity, portfolio strategy, and go-to-market execution.
- **Marketing Communications/Advertising**- Planning and executing integrated campaigns across multiple channels.
- **Digital Marketing/Content Marketing** – Driving brand presence and engagement through social media, content marketing, and online advertising.
- **Market Research** – Gathering and interpreting data to refine brand strategies and communication efforts.

Managing & Developing Products

Why This Course

A product is the first ‘P’ of the marketing mix. This course aligns product strategy to business goals. It provides students with the knowledge & skills needed to manage the entire product lifecycle. Learners will gain hands-on experience in managing the product portfolio and developing products from ideation to implementation. The course equips learners to develop and deliver products that solve real customer problems and create market value.

Pre-requisites (if any): Marketing Management (core course), Brand Management & MarCom (Elective)

Competencies this course develops

- **Portfolio Management**- Analyzing and managing the product portfolio for a company/brand.
- **Product Development** – Developing a product from ideation to implementation.
- **Customer-Centric Design** – Applying customer research and design thinking principles to create products.

Jobs this course is most relevant to

Ideal for roles that require managing product portfolio, developing products and ownership of product success.

- **Product Management** – Owning product strategy, development, and performance metrics.
- **Product Development** – Driving technical and design efforts to bring ideas to market.
- **UX Research/Product Analyst** – Gathering user insights to guide product features and design.
- **Product Marketing**– Positioning and promoting products to the right audiences.
- **Entrepreneurship** – Building and managing product offerings within startups or new ventures.

Social Media and Content Marketing

Why this Course

This course focuses on contemporary social media and content marketing, providing insights into their commercial use. It is vital in today's landscape as effective social media and content strategies are crucial for audience engagement, brand building, and driving business growth across various platforms.

Pre-requisites (if any): Marketing Management, Digital Marketing, AI and Technology for Business

Competencies this course develops

By participating in this course, the learner will be able to:

- Design integrated social media and content marketing strategies tailored to specific target audiences and business goals.
- Critically evaluate the effectiveness of social media platforms and content types in achieving marketing objectives.
- Analyze campaign performance data to derive meaningful insights and optimize marketing efforts.
- Assess ethical and legal considerations in social media marketing and recommend best practices, and create innovative multi-channel campaigns

Jobs this course is most relevant to

- Social Media Manager
- Content Marketing Strategist
- Digital Marketing Specialist

Digital Marketing

Why This Course

This course offers a managerial perspective on the strategic and tactical aspects of digital marketing in modern organizations. You will explore how digital channels—from search engines and social media to email and mobile—are leveraged to create, capture, and communicate value. The course covers current frameworks for measuring digital campaign performance, designing customer-centric digital experiences, and understanding data-driven marketing. You will also compare how digital marketing tactics differ from traditional approaches and learn to manage digital platforms to build sustainable customer relationships in both B2B and B2C contexts.

Pre-requisites (if any): Marketing Management, and AI and Technology for Business

Competencies this course develops

- **Understanding** the digital customer journey and touchpoints throughout the marketing funnel
- **Designing** and implementing effective digital marketing strategies, including SEO, SEM, social media, email, and content marketing.
- **Interpreting** marketing analytics and leveraging data to optimize campaign performance
- **Appreciating** the ethical, privacy, and regulatory considerations in digital marketing

Jobs this course is most relevant to

Relevant for a Career in Sales & Marketing: Roles in Digital Marketing, Social Media

Management, Content Marketing, Digital Analytics, E-commerce, and Customer Engagement

Managing Ecommerce Channels

Why This Course

Ecommerce is a mainstream member for any economy. It is growing at a very rapid pace, presenting newer opportunities to innovate and create value. This course provides both academic knowledge and practical expertise, making it relevant for careers in digital marketing and the Direct-to-Consumer (D2C) sector.

Pre-requisites (if any): Marketing Management, Digital Marketing, AI and Technology for Business

Competencies this course develops

By participating in this course, the participant will be able to:

- **Design** integrated e-commerce channel strategies to meet organizational objectives, considering various digital, mobile, and omnichannel approaches.
- **Critically evaluate** the effectiveness of different e-commerce business models and channel configurations in diverse industry and geographic contexts.
- **Analyze** e-commerce performance data, customer experience metrics, and channel ROI to generate insights for continuous optimization and innovation.
- **Assess** legal, ethical, and regulatory considerations in managing e-commerce channels and recommend compliant solutions to real-world challenges.
- **Create** comprehensive channel management plans—including logistics, technology, payments, and partner ecosystems—that synthesize best practices and emerging trends for competitive advantage

Jobs this course is most relevant to

- Digital Marketing Manager
- E-commerce Channel Manager
- Business Development Manager in the D2C sector

Performance Marketing

Why this Course

This course equips students with applied strategies and analytics skills crucial for launching successful careers in digital advertising, performance marketing, and data-driven growth roles across various industry sectors. It is essential in today's digital landscape as performance marketing focuses on measurable results and maximizing return on investment in advertising efforts.

Pre-requisites (if any): Marketing Management, Digital Marketing

Competencies this course develops

By participating in this course, the learner will be able to:

- Design integrated, multi-channel performance marketing campaigns using data and real-world platform tools.
- Critically evaluate digital performance metrics and attribution models for optimization and decision-making.
- Analyze complex datasets from paid, earned, and owned channels to generate actionable insights and drive ROI.
- Create innovative and ethically sound strategies leveraging automation, analytics, and emerging technologies in performance marketing.

Jobs this course is most relevant to

- Digital Marketing Specialist
- Performance Marketing Manager
- Growth Hacker

B2B Marketing

Why This Course

This course provides a managerial introduction to the strategic and tactical aspects of business marketing decisions. This course helps to understand how product and service decisions are designed to deliver the B2B value proposition, how pricing captures customer value, how value is communicated to and among customers, and how marketing channels are used to make this value accessible to target customers. This course also helps to compare how the strategic and tactical processes of developing and managing value-generating relationships differ between B2B and B2C markets.

Pre-requisites (if any): Marketing Management

Competencies this course develops

- **Reinforce** understanding of core marketing concepts/frameworks and how they apply it in the context of B2B markets & customers
- **Compare** and contrast between B2B and B2C businesses and as a result be able to assimilate how the Customer Decision Journey needs to be managed
- **Understand** the opportunity lifecycle in the context of the Sales Funnel and learn the elements of effective Opportunity Management
- **Understanding** the Selling Organization and the Buying Organization and how it influences successful sales outcomes
- **Understanding**
 - What drives the customer's decision-making process
 - Recognizing the importance of creating value for the customer
 - Learning how this value can be effectively communicated to the customer

Jobs this course is most relevant to

Applicable for a Career in Sales & Marketing: Roles in Business Development, Key Account Management, Inside Sales, Pre-Sales, Customer Success, B2B Marketing.

Channel & Trade Management

Why This Course

Efficient and effective distribution is critical to delivering value to customers and ensuring product availability. This course focuses on designing, managing, and optimizing marketing channels and trade relationships. It equips students with the skills to select appropriate channel structures, manage channel conflict, develop trade promotions, and build strong partnerships across the value chain. With the rise of omnichannel retailing and digital platforms, this course helps future marketers navigate the evolving landscape of distribution and trade management.

Pre-requisites (if any): Marketing Management (core course)

Competencies this course develops

Channel Strategy – Designing channel structures aligned with customer segments, product characteristics, and market requirements.

Channel Partner Management – Managing relationships with distributors, wholesalers, and retailers, including onboarding, incentives, and performance monitoring.

Trade Marketing – Planning and executing trade promotions and merchandising strategies to influence channel partners and drive sell-through.

Conflict & Coordination – Identifying and managing channel conflict and aligning incentives across the channel ecosystem.

Jobs this course is most relevant to

- **Trade Marketing** – Driving demand through channel promotions and execution excellence.
- **Channel Sales/Distribution Management** – Managing partner relationships and ensuring market coverage.
- **Retail Marketing** – Influencing in-store shopper behavior and improving store performance.
- **Key Account Management** – Building strategic partnerships with major retailers or B2B clients.

Key Account Management

Why This Course

This course provides a managerial perspective on developing and sustaining high-value relationships with strategic customers. You will explore how organizations identify, engage, and grow key accounts through customized solutions, collaborative partnerships, and cross-functional coordination. The course combines frameworks for account selection, planning, and development with practical tools for building trust, managing complex negotiations, and measuring account profitability. You will also learn how digital transformation and analytics are reshaping the management of key accounts in dynamic B2B and B2C markets.

Pre-requisites: Marketing Management, B2B Marketing, Strategic Selling

Competencies this course develops

- **Develop** criteria to distinguish between key accounts and non-key accounts.
- **Design and execute** tailored value propositions for key customers
- **Effective account planning**, including opportunity management, resource allocation, and stakeholder mapping
- **Building and nurturing** long-term partnerships through trust, collaboration, and influence
- **Navigating** digital tools and data analytics to strengthen key account relationships and performance measurement

Jobs this course is most relevant to

Applicable for a Career in Sales & Marketing: Roles in Key Account Management, Strategic Account Leadership, Customer Success, Large Account Sales, and Business Development.

Strategic Selling & Managing Sales Teams

Why This Course

In competitive markets, selling is no longer about pushing products—it is about delivering tailored solutions, building relationships, and driving value for both the customer and the organization. This course equips students with strategic selling techniques and the ability to lead high-performing sales teams. It integrates concepts from customer relationship management, B2B selling, key account management, and sales force leadership to help learners understand the full arc of the sales function. Emphasis is placed on aligning sales efforts with organizational strategy and developing the capabilities required to lead in a dynamic selling environment.

Pre-requisites (if any): Nil

Competencies this course develops

Strategic Selling – Understanding complex sales cycles, stakeholder mapping, and value-based selling techniques, especially in B2B and consultative contexts.

Sales Planning & Forecasting – Developing territory plans, setting sales targets, and using forecasting models to drive predictable revenue.

Key Account Management – Managing large and strategic clients by creating mutual value, nurturing long-term relationships, and maximizing account potential.

Sales Team Leadership – Recruiting, training, motivating, and evaluating sales teams for performance and alignment with business objectives.

Negotiation & Influence – Building negotiation skills that drive win-win outcomes in complex and high-stakes selling environments.

Jobs this course is most relevant to

- **Sales Manager/Team Leader** – Leading and developing sales teams to meet growth targets.
- **Key Account Manager** – Managing high-value clients and delivering tailored solutions.
- **Business Development Manager** – Identifying and converting new business opportunities in strategic accounts.
- **Inside Sales/Digital Sales Leader** – Driving revenue through remote and tech-enabled sales channels.

Retail Management

Why this Course?

The retail sector is one of the most dynamic and fastest-growing industries globally, with India's retail market projected for significant expansion. This course provides learners with a strategic window into the fundamentals of managing large format retailers. It is designed to equip you with the essential knowledge and skills to navigate the complexities of modern retail, including understanding diverse business models, optimizing operations, leveraging technology, and delivering exceptional customer experiences. For those aspiring to undertake exciting careers in retail, this course acts as a stepping-stone.

Pre-requisites (if any): None

Competencies this course develops

1. **Analyze** retail scenarios, integrating strategic frameworks and industry trends to identify key challenges and opportunities.
2. **Formulate** comprehensive retail strategies across merchandising, pricing, location, and customer experience for competitive advantage.
3. **Evaluate** retail technologies and data analytics, proposing innovative solutions for efficiency and personalized customer journeys.
4. **Design** sustainable and ethical retail practices, understanding their impact on brand reputation and long-term viability.
5. **Develop** actionable recommendations for adapting or creating new retail models, responding to emerging consumer behaviors and market shifts.

Jobs this course is most relevant to

This course is particularly useful for those who wish to commence a career in retail, Potential roles include:

- Retail Store Manager
- Category Manager
- Retail Operations Manager
- Franchise Development Manager
- Retail Analyst
- Customer Experience Manager (Retail)

Shopper Marketing

Why This Course

In today's hyper-competitive retail environment, the path to purchase is influenced by complex decision-making processes at the point of sale. Shopper Marketing focuses on understanding and influencing shopper behavior across offline retail channels. This course equips students with the frameworks and tools to develop strategies that convert shoppers into buyers by optimizing in-store experiences, digital retail journeys, and collaboration between brands and retailers.

Pre-requisites (if any):

Marketing Management (core course), Retail Management (elective), Channel & Trade Management (elective)

Competencies this course develops

- **Shopper Insight** – Understanding shopper behavior, missions, and decision triggers at the point of sale.
- **Path-to-Purchase Mapping** – Analyzing how consumers move from awareness to purchase across touchpoints.
- **Retail Strategy** – Collaborating with modern and traditional trade formats, and leveraging retail data for decision-making.
- **In-store Marketing & Merchandising** – Designing effective promotions, POS material, packaging, and shelf strategy to drive conversion.
- **Shopper Communication** – Integrating communication that connects brand messaging with shopper needs in retail environments.

Jobs this course is most relevant to

- **Trade Marketing/Shopper Marketing** – Planning and executing campaigns at the retail level to influence shopper decisions.
- **Brand Activation/Category Management** – Designing in-store experiences that align with brand goals and shopper behavior.
- **Retail Marketing** – Working with modern trade partners to drive conversion.
- **Customer Marketing** – Bridging the gap between brand strategy and retail execution.

Services Marketing

Why this Course

This course provides a strategic understanding of services marketing and its unique challenges, enabling participants to design and manage service offerings effectively. It is crucial for improving service quality, enhancing customer satisfaction, and formulating strategies that align with business goals in today's customer-centric environment. The course also touches upon the applications of AI relevant to the role of a marketer.

Pre-requisites (if any): Marketing Management

Competencies this course develops

By participating in this course, the learner will be able to:

- Design and create integrated service offerings and multi-channel strategies that align with business goals and address unique service challenges.
- Evaluate critically the effectiveness of service management strategies, service quality metrics (like SERVQUAL), and customer experience designs for continuous optimization.
- Analyze complex service processes and performance data to derive meaningful insights, including the application of AI relevant to marketing roles, and formulate value-delivering strategies.
- Recommend and apply best practices for service differentiation, service encounter management, and service recovery, while integrating relationship marketing and service branding principles.

Jobs this course is most relevant to

- Services Marketing Manager
- Customer Experience Manager
- Service Operations Manager (Hospitality, Travel & Tourism, B2C Services)

Marketing Capstone Project

Why This Course

The Capstone Project is a culmination of your learning journey, designed to integrate and apply the knowledge, skills, and frameworks gained throughout your management program to solve complex, real-world business challenges. Working individually or in teams, you will partner with an organization or work on simulated case scenarios to address a substantive business or marketing problem. The course emphasizes research-driven analysis, strategic planning, cross-functional collaboration, and actionable recommendations, reflecting industry expectations and professional practice. Through this hands-on experience, you will build the confidence and competence required for your professional transition into the workplace.

Pre-requisites: None (Typically taken as the final course in the program)

Competencies this course develops

- Integrating and applying multidisciplinary knowledge to analyze and solve complex business problems
- Conducting rigorous market, industry, and competitive analyses using primary and secondary research
- Designing and presenting comprehensive business or marketing strategies and implementation plans
- Strengthening project management, teamwork, client engagement, and presentation skills
- Exercising critical thinking, creativity, and ethical judgment in crafting actionable recommendations

Applicable for a Career in Sales, Marketing, Consulting, Business Development, Corporate Strategy, and Entrepreneurship
